Selection Committee
Security Manpower Training (SMT) Program 2026
INKOR, in collaboration with KISIA and NSHC

Dear Selection Committee,

My name is Muhammad Abiyyu Rahman, a Master's student in Informatics at Universitas AMIKOM Yogyakarta, concentrating in Digital Transformation Intelligence and currently in my second semester. I am writing to apply for the SMT Program 2026. What excites me most is learning directly from Korean cybersecurity professionals, and what I hope to gain is the practical depth that self study alone has not given me.

My background is three years as IT Staff at Dinas Perhubungan Kota Banjarmasin, handling firewall configuration, user access control, and daily backup procedures. Since then I have delivered production systems for clients, including a workforce mapping dashboard for PLN and an ERP system for a fuel distribution company, both requiring role based access, audit logs, and segregation of duties. I also completed the Google Cybersecurity Professional Certificate and a CISA specialization. These taught me how systems are built and operated. They did not teach me how systems are attacked and defended, and that gap is why I am applying.

I am currently developing A.E.G.I.S, the Automated Extraction, Gathering, and Intelligence System, combining penetration testing tooling, a Wazuh based monitoring dashboard, OSINT sentiment analysis of Indonesian social media, and an orchestration agent in one platform. It is built to explore cybersecurity, not a finished product, and SMT would give it the rigor it lacks. What I can contribute is discipline in documentation, a habit of writing requirements and architecture before any code, and adaptability proven across public sector and client work.

Last year I rebuilt my professional identity from zero, removing every claim I could not defend. That principle is what I bring here. I would rather be a beginner who is honest than a specialist on paper. I am enclosing my curriculum vitae, portfolio, and academic transcript. Thank you for your time.

Sincerely,

Muhammad Abiyyu Rahman
