Systematic Literature Review

Prof. Dr. Ema Utami, S.Si., M.Kom.
Hanif Al Fatta, S.Kom., M.Kom., Ph.D.
Alva Hendi Muhammad, S.T., M.Eng., Ph.D.

Literature Review

UNIVERSITAS AMIKOM YOGYAKARTA

- Membaca dan menelaah pustaka-pustaka yang relevan
- Secara sistematis, terstruktur dan komprehensif
- Untuk mengidentifikasi State of The Art (SoTA)

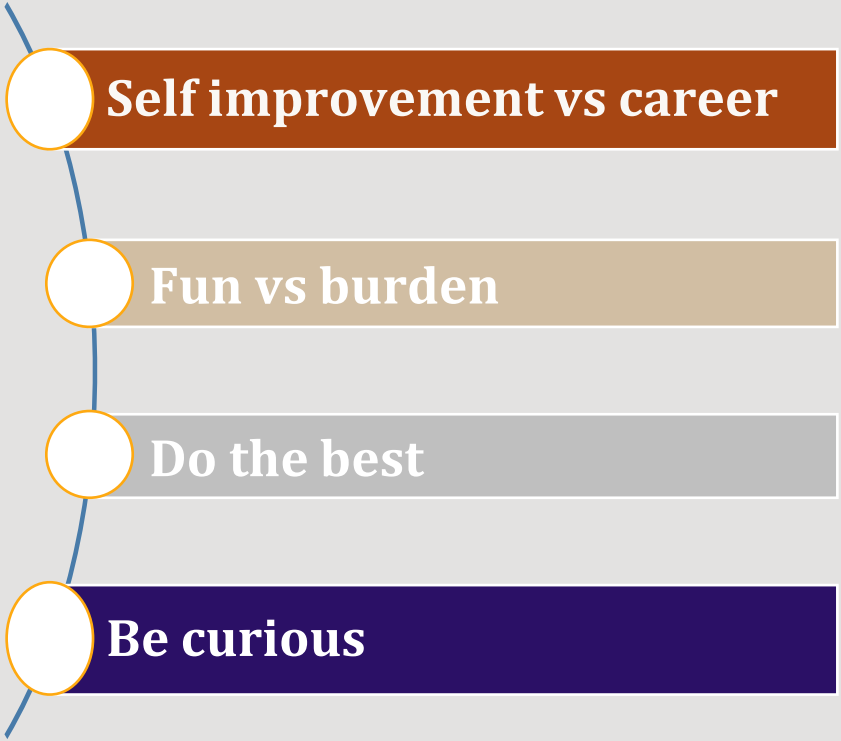

Membaca

UNIVERSITAS AMIKOM YOGYAKARTA

- Membaca adalah aktivitas yang personal dan intimate
- Membaca tidak dapat didelegasikan
- Membaca membutuhkan waktu
- Sehingga membaca harus dilakukan secara sistematis

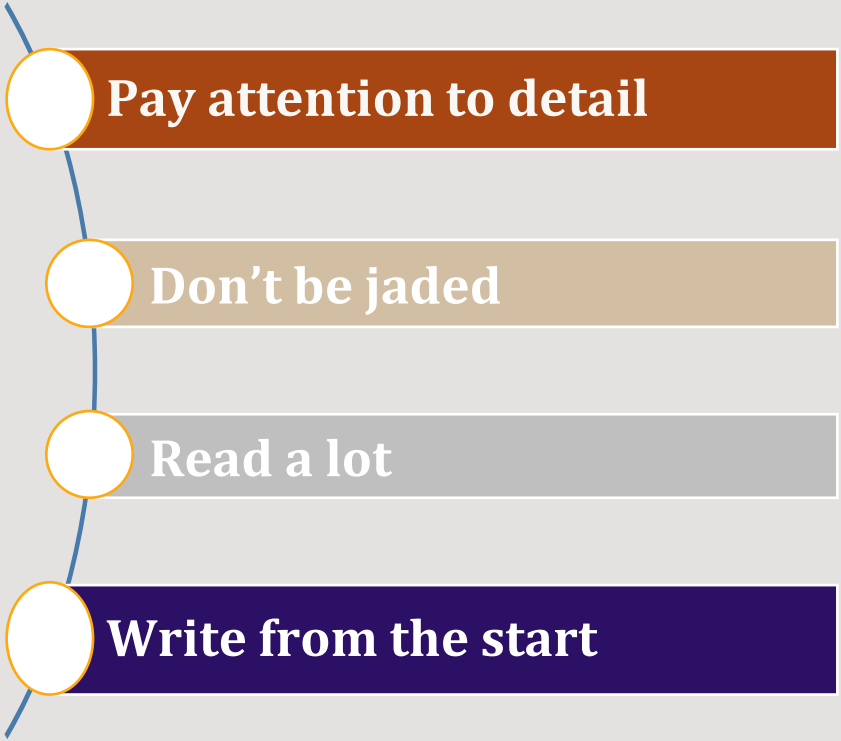

Motivasi

UNIVERSITAS AMIKOM YOGYAKARTA

Motivasi

UNIVERSITAS AMIKOM YOGYAKARTA

Menulis

UNIVERSITAS AMIKOM YOGYAKARTA

- Menulislah dari awal
- Menulis membuat pikiran terstruktur
- Menulis memaksa kita untuk berpikir jelas dan terfokus
- Menulis memperjelas apa yang belum dimengerti

Menulis

UNIVERSITAS AMIKOM YOGYAKARTA

- Menulis membuka jalan untuk berdialog dengan orang lain
- Menulis harus memperhatikan format dan sistematika
- Gunakan bahasa yang benar dan baik
- Hindari plagiarisme

Gunakan Bahasa yang Baik dan Benar

UNIVERSITAS AMIKOM YOGYAKARTA

- Benar = Sesuai Aturan
- Baik = Jelas dan Dapat Dimengerti
- Semakin panjang sebuah kalimat, semakin sulit kalimat itu dimengerti

Method

factuality of reporting have not only a linguistic aspect but also a social context. Here, we study the impact of both, namely (*i*) *what was written* (the text of the articles published by the target medium, the text and the audio signal in the videos of its YouTube channel, as well as how the medium self-describes itself on Twitter) vs. (*ii*) *who read it* (by analyzing the media readers in Facebook, Twitter, and YouTube). We further study (*iii*) *what was written about the target medium* on Wikipedia.

Method

Our contributions can be summarized as follows:

- We model the leading political ideology (left, center or right bias) and the factuality of reporting (high, mixed, or low) of news media by modeling the textual content of what they publish vs. who reads it in social media (Twitter, Facebook, and YouTube). The latter is novel for these tasks.
- We combine a variety of information sources about the target medium, many of which have not been explored for our tasks, e.g., YouTube video channels, political bias estimates of their Facebook audience, and information from the profiles of the media followers on Twitter.

Method

- We use features from different data modalities: text, metadata, and speech. The latter two are novel for these tasks.
- We achieve sizeable improvements over the cur-

check the general stance of that medium concerning already fact-checked claims (Mukherjee and Weikum, 2015; Popat et al., 2017, 2018). Therefore, stance detection became an essential component in fact-checking systems (Baly et al., 2018b).

In political science, media profiling is essential for understanding media choice (Iyengar and Hahn, 2009), voting behavior (DellaVigna and Kaplan, 2007), and polarization (Graber and Dunaway, 2017). The outlet-level bias is measured as a similarity of the language used in news media to political speeches of congressional Republicans or Democrats, also used to measure media slant (Gentzkow and Shapiro, 2006). Article-level bias was also measured via crowd-sourcing (Budak et al., 2016). Nevertheless, public awareness of media bias is limited (Elejalde et al., 2018).

Political bias was traditionally used as a feature for fact verification (Horne et al., 2018b). In terms of modeling, Horne et al. (2018a) focused on predicting whether an article is biased or not. Political bias prediction was explored by Potthast et al. (2018) and Saleh et al. (2019), where news articles were modeled as left vs. right, or as hyperpartisan vs. mainstream. Similarly, Kulkarni et al. (2018) explored the left vs. right bias at the article level, modeling both textual and URL contents of articles.

In our earlier research (Baly et al., 2018a), we analyzed both the political bias and the factual-

ChatGPT

I found several academic papers that delve into personality profiling using the DISC (Dominance, Influence, Steadiness, Conscientiousness) assessment tool. Here are some notable ones:

1. **"Using the DISC Behavioral Instrument to Guide Leadership and Communication"**:
   - This paper discusses how the DISC instrument categorizes behaviors into four pers types: Dominant, Influencer, Steady, Conscientious. It also provides methods for lea work effectively with each personality type, emphasizing the importance of having a mix of personalities on teams for optimal success [”].
2. **Springer Article on DISC Assessment**:
   - This resource describes the DISC assessment as a long-standing self-assessment t gauge multidimensional states relate ersonality. It defines personality as indivi differences in characteristic patterns of thinking, feeling, and behaving [”].
4. **"Profiling Analysis of DISC Personality Traits Based on Twitter Posts"**:
   - This study explores the use of DISC personality traits in profiling based on Twitter posts. It touches upon the concept of moods as light forms of emotions and discusses the personal profile system's reflection of behavior consistency and adaptation [”].
5. **"Supervised Learning and Resampling Techniques on DISC Personality"**:
   - This paper examines the intersection of psychology and computer science in understanding personality traits. It highlights the efficiency of analyzing profile data from personal social media accounts, which reduces data collection time as it does not require users to fill out questionnaires [”].

These papers offer a diverse range of approaches and applications of the DISC assessment in understanding and profiling personalities, f m academic research to practical applications in leadership and social media analysis.

I found additional information related to the study "Profiling analysis of DISC personality traits based on Twitter posts." This study focuses on classifying Twitter users' personality based on the DISC framework using text data from tweets. For this analysis, they processed text data from 292 users, focusing on personal accounts with Indonesian language posts. They employed keyword vocabularies corresponding to the DISC framework and experimented with various scenarios involving stemmed and weighted keywords, ultimately finding that non-stemmed and non-weighted scenarios showed the best results. The study aims to develop an automatic profiling system using Natural Language Processing and Machine Learning approaches [].

Additionally, I explored a related study titled "Cross-platform and cross-interaction study of user personality based on images on Twitter and Flickr." This study examines the predictive value of different social media platforms in understanding how users reveal themselves. It analyzes the variation in image content with user personality across different interaction types (posts, likes, and profile images) and platforms (Twitter and Flickr). The study's goals included quantifying image sharing preferences and building models to predict users' personality in a cross-modal and cross-platform setting. It contributes to understanding how personality traits are expressed differently across platforms through images and the potential for improving personality prediction performance by combining data from multiple platforms [].

There are numerous studies focusing on personality analysis using social media data, particularly image-based content. These studies explore various aspects such as the relationship between personality traits and image content, the use of different types of social media interactions for personality analysis, and the effectiveness of cross-platform data in enhancing personality predictions.

Unfortunately, due to limitations in accessing full texts and detailed information from certain academic databases, I was unable to retrieve more specific connected studies. However, the mentioned studies offer valuable insights into the growing field of personality analysis through social media content, both text-based and image-based.

Systematic Literature Review (SLR)

merangkum secara sistematis hasil-hasil penelitian primer dari jurnal yang bereputasi baik untuk menyajikan fakta yang lebih komprehensif dan berimbang guna meminimalisir bias, dapat direplikasi, serta mendapatkan sugestion penyelesaian masalah

Bahan SLR

UNIVERSITAS AMIKOM YOGYAKARTA

banyaknya artikel ilmiah yang dijadikan rujukan menjadi suatu keharusan

batas minimum artikel ilmiah yang dianalisis untuk SLR adalah 46-50 artikel

artikel ilmiah yang dianalisis harus berasal dari jurnal yang bereputasi baik karena dipastikan bahwa proses review artikel ilmiah tersebut sudah cukup panjang dan terbukti kebenarannya dengan rangkaian validasi dari tim reviewer yang ahli di bidangnya

Langkah SLR

UNIVERSITAS AMIKOM YOGYAKARTA

- Identifikasi scope pertanyaan atau masalah penelitian yang ingin dijawab oleh SLR
- Fokuskan tujuan melakukan SLR dan pastikan bahwa itu relevan dan bermanfaat
- Kembangkan perencanaan dan struktur SLR
- Tetapkan sumber-sumber jurnal yang bereputasi untuk melakukan pencarian artikel ilmiah

Langkah SLR

UNIVERSITAS AMIKOM YOGYAKARTA

- Pastikan artikel yang terjaring berkualitas dan relevan dengan tujuan SLR
- Seleksi artikel-artikel ilmiah yang sesuai dengan scope pertanyaan
- Rangkum hasil temuan-temuan dari setiap artikel yang sudah diperiksa kualitas temuannya
- Sajikan hasil temuan-temuan dengan visualisasi yang sistematis dan lakukan analisis

SLR yang Baik

Mampu :
- **mengidentifikasi**,
- **menilai**, dan
- **menginterpretasi**

seluruh temuan-temuan untuk menjawab pertanyaan penelitian atau masalah penelitian yang telah ditetapkan sebelumnya
