If you fail to plan, then you plan to fail…

"End to end" delivery of Enterprise Solutions rests on the keystone of Project Portfolio Management, balanced by a Scorecard and a Capabilities Plan

- Misi dan Visi Bisnis mendorong kebutuhan kapabilitas.
- Balanced Scorecard mendefinisikan strategi yang dapat diuji untuk menghasilkan nilai bisnis.
- Capabilities Based Planning mendefinisikan hasil bisnis.
- Event based tasks menjadi dasar peningkatan kematangan kapabilitas.

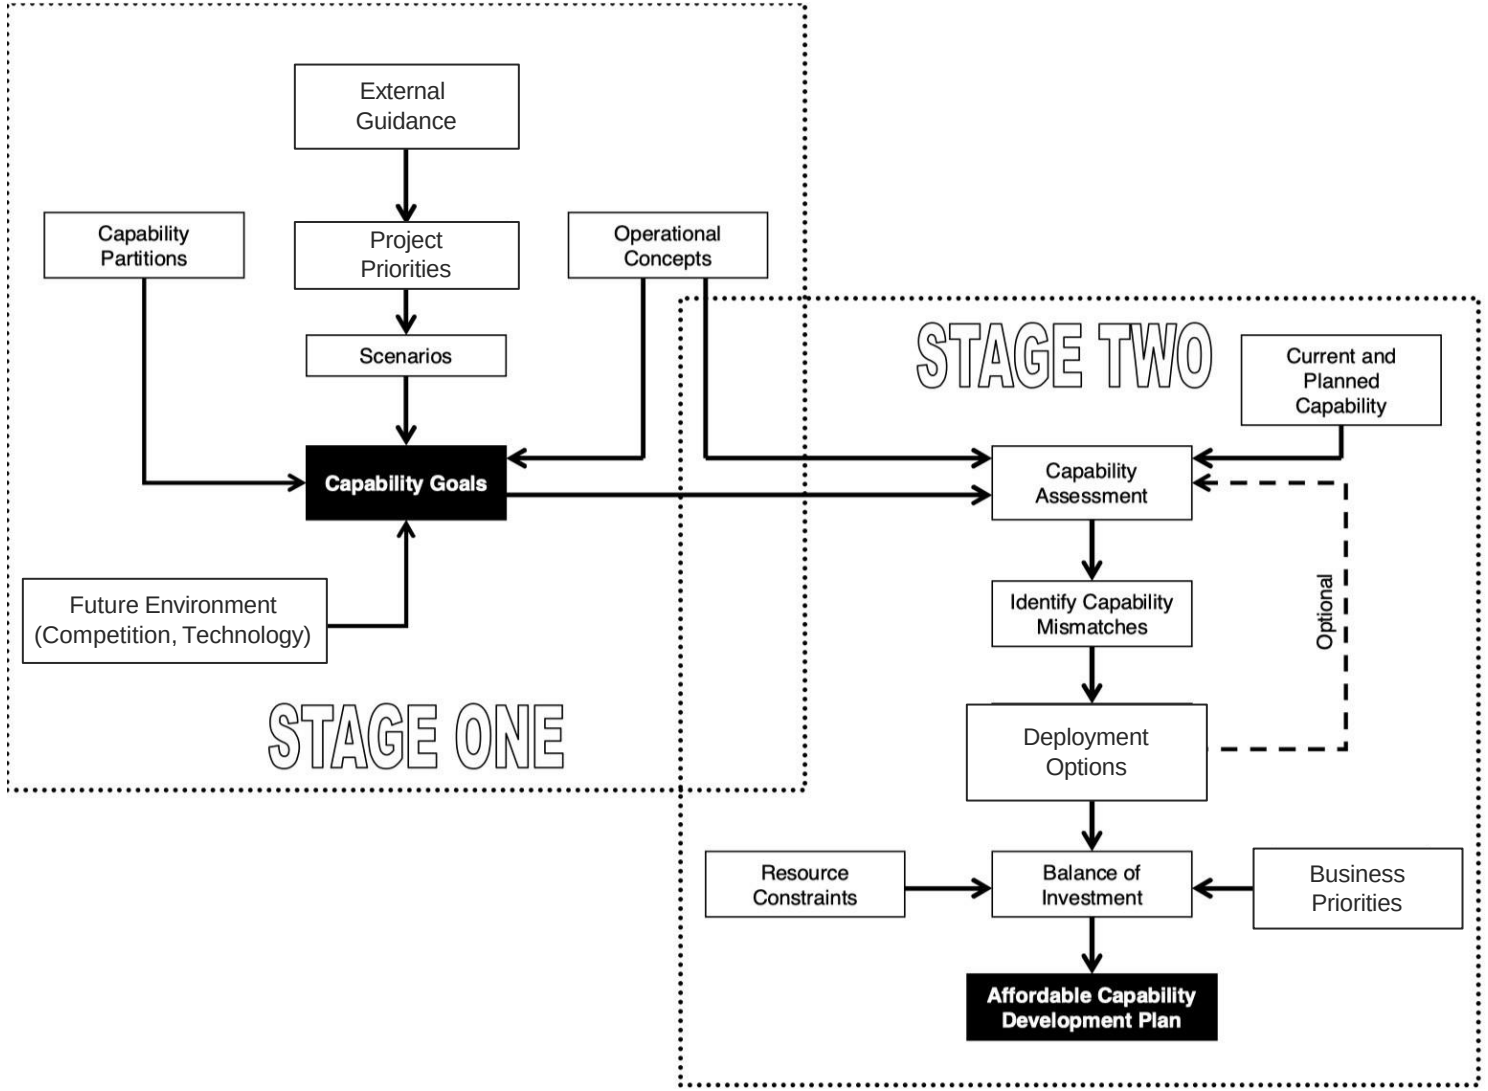

Pengertian Capability

- **Kemampuan (capability)** adalah kecakapan, kapasitas, atau potensi yang dimiliki oleh suatu organisasi, individu, atau sistem.
- Diungkapkan dalam istilah yang umum dan tingkat tinggi.
- Memerlukan kombinasi berbagai aset (misalnya: manusia, proses, dan teknologi).
- Membantu memulai diskusi tentang hasil bisnis.Proses terlalu rinci, aplikasi terlalu teknis, dan proyek berfokus pada hasil jangka pendek.
- Kapabilitas merangkum dan mengabstraksi.

Capability-Based Planning

- Capability-Based Planning mengubah layanan perusahaan dari sekadar penyampaian fitur dan fungsi menjadi proses penyampaian yang mendukung strategi.
- Capability-Based Planning adalah perencanaan dalam kondisi ketidakpastian untuk menyediakan kapabilitas yang sesuai dengan berbagai tantangan dan situasi bisnis, sambil tetap berada dalam kerangka ekonomi.
- Capability-Based Planningmenekankan fleksibilitas, adaptivitas, dan kapabilitas yang tangguh, yang menyiratkan pendekatan modular berbasis blok bangunan terhadap Layanan Perusahaan.
  - Transformasi terjadi ketika modul-modul baru mulai digunakan.

Affordable Capability Development Plan

Tahap - 1

- Tahap pertama mengambil perspektif strategis top-down yang berorientasi ke luar terhadap tuntutan lingkungan bisnis.
- Tujuan Kapabilitas adalah pernyataan dalam istilah spesifik dan terukur mengenai tingkat kapabilitas yang diinginkan untuk memenuhi prioritas atau tujuan yang dibutuhkan.
- Skenario dibuat untuk menentukan faktor-faktor yang perlu dipertimbangkan dalam perencanaan dan mengungkapkan kekhawatiran.

Tahap – 2

- Tahap kedua mengambil pendekatan bottom-up untuk menilai kinerja sistem saat ini terhadap tujuan kapabilitas guna memberikan masukan untuk tindakan perbaikan.
- Identifikasi kesenjangan kapabilitas secara menyeluruh, termasuk kekurangan dan kelebihan.
- Langkah akhir menghasilkan opsi kapabilitas untuk mengatasi kesenjangan serta penilaian terhadap biaya, jadwal, dan risiko dari masing-masing opsi.

Perencanaan Berbasis Kapabilitas dipahami pada level eksekusi, namun perlu ditingkatkan ke level analisis proses perusahaan.

- Identifikasi kapabilitas yang dibutuhkan dalam istilah kebutuhan operasional;
- Menggunakan serangkaian opsi kapabilitas untuk:
  - menilai efektivitas dalam paradigma operasional, dan;
  - membuat pilihan terkait kebutuhan serta cara mencapai kapabilitas menggunakan kerangka kerja portofolio terintegrasi;
  - untuk menghasilkan keluaran berupa serangkaian opsi berdasarkan paradigma operasional tersebut.

- Banyak proyek perusahaan berfokus pada penyampaian fitur dan fungsi yang ditingkatkan, namun mengabaikan penyampaian kapabilitas yang dibutuhkan untuk menjalankan strategi.

Standish Chaos Report Failure Modes	Capabilities Based Planning
Absence of a clear vision and statement of the requirements expectations	Maturity assessment program events provide visibility of progress independent of effort or time
Estimating difficulties and organizational politics result in unrealistic expectations	Capability assessment points define “done” using agreed on measures of progress
Poor project decomposition	Master Plan and Master Schedule vertically and horizontally integrated
Inadequate staffing	Resource loaded schedules
Lack of stakeholder involvement	Capabilities defined by business needs
Lack of strategic focus	Capabilities connected to Balanced Scorecard

Skenarion CBP

Scenarios	Work Tasks	Capabilities
The business unit's operational needs in scenario terms Merge a General Ledger from a 3rd party database through a data conversation process	*The individual work processes needed to fulfill the scenarios* 1. Define the data to be acquired from the new firm 2. Verify data conversation can take place 3. Verify that business operations can continue	*The planned capability of the Business Units at each level of maturity* "Acquire a $100M business unit in 90 days or less" "Process 100% AP invoices from tier 1 vendors saving $9M annually"
Business Process Improvement	Project Management	Strategy Management

Kematangan CBP

- Menentukan tingkat kematangan yang diinginkan dari proses bisnis adalah titik awal untuk mengintegrasikan Balanced Scorecard dengan proses penerapan Layanan Perusahaan.

- Integrated Master Plan (IMP) untuk Layanan Perusahaan dimulai dengan identifikasi peningkatan kematangan kapabilitas.
- Keberhasilan penyampaian fitur dan fungsi pendukung dapat diukur melalui penyelesaian Significant Accomplishments dan kriterianya.

Fokus CBP

- Fokus dari Perencanaan Berbasis Kapabilitas adalah pada penilaian peningkatan kematangan fungsionalitas yang didefinisikan oleh strategi Balanced Scorecard.
- Perencanaan dalam ketidakpastian menyediakan kapabilitas yang sesuai untuk berbagai tantangan dan situasi, sambil tetap berada dalam kerangka ekonomi yang menuntut adanya pilihan.
- Fokus pada “kemungkinan” daripada fitur.
  - “Fitur apa yang kita butuhkan untuk mencapai kapabilitas yang diinginkan?”
  - “Seberapa banyak dari setiap kapabilitas yang kita butuhkan saat ini?”
  - “Seberapa tangguh, fleksibel, dan mampu kita harus berada pada suatu waktu untuk menyediakan kapabilitas yang dibutuhkan?”

- Perencanaan Berbasis Kapabilitas mengambil pandangan jangka pendek dan jangka panjang terhadap kematangan fungsional yang dibutuhkan untuk menjalankan strategi Layanan Perusahaan.
- Penggunaan efektif proses, alat, fitur, dan fungsi dalam jangka pendek.
- Penggunaan infrastruktur dan kapabilitas sistem yang andal di masa depan.
  - Solusi bersama terhadap masalah dengan mengidentifikasi koneksi vertikal antar proses bisnis.
  - Penilaian trade-off risiko dari solusi vertikal dalam dan lintas proses bisnis.
  - Membangun kapabilitas untuk merespons berbagai kemungkinan kebutuhan.

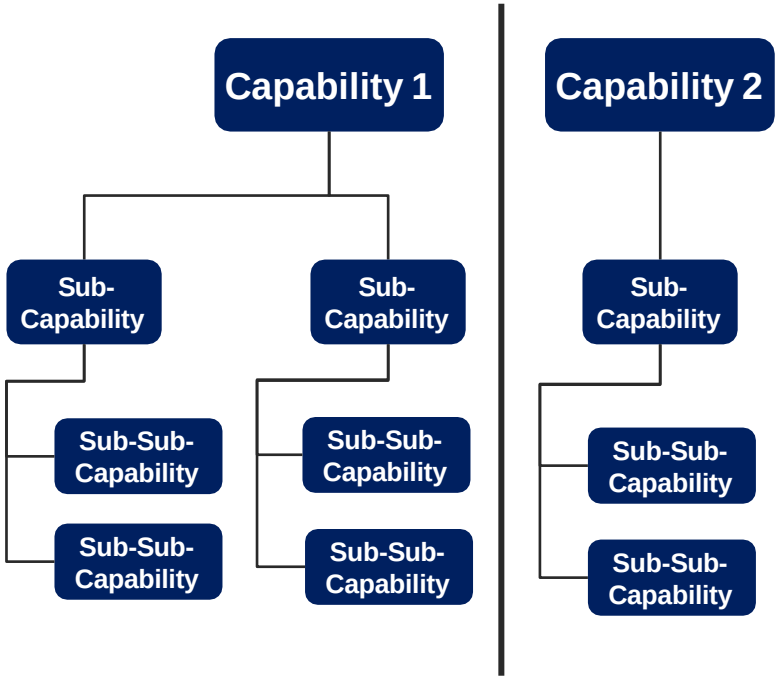

The Six Trusted Friends

- **Siapa (Who)** – Pemangku kepentingan dan pihak yang bertanggung jawab.
- **Apa (What)** – Kapabilitas, fitur, atau hasil yang ingin dicapai.
- **Kapan (When)** – Waktu pelaksanaan dan pencapaian target.
- **Di mana (Where)** – Lokasi atau konteks operasional kapabilitas.
- **Mengapa (Why)** – Alasan strategis dan tujuan bisnis.
- **Bagaimana (How)** – Pendekatan, proses, dan metode untuk mencapainya.

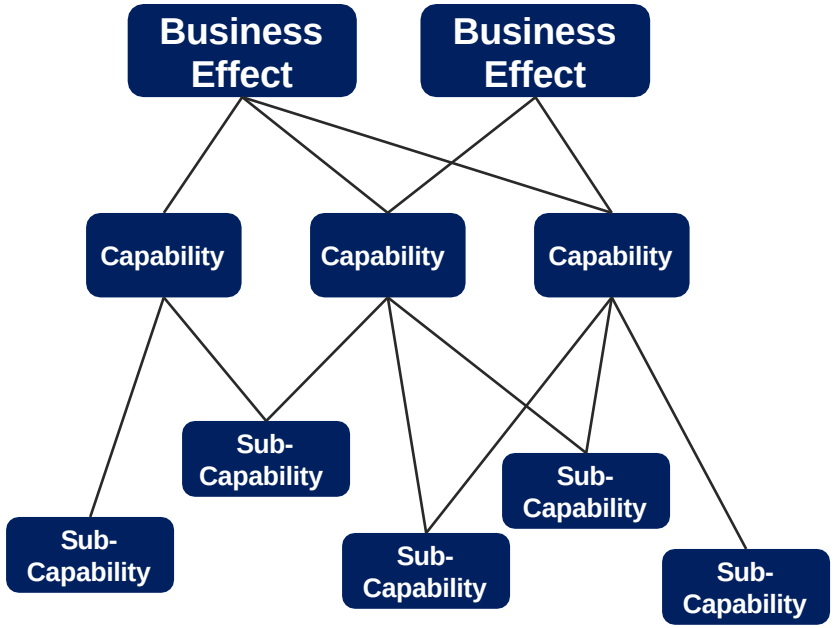

The Six Trusted Friends

Why are we doing this?	Balanced Scorecard
What is it we're doing?	Program Events
How is this going to be accomplished?	Significant Accomplishments
When will we know it is done?	Accomplishment Criteria
When will we be done?	Tasks
Who going to do the work at what cost?	Resources
Where will the work take place?	Teams

Ukuran Dampak Bisnis dari Layanan Perusahaan

- Functional decomposition of capabilities
- Capabilities must be Collectively Exhaustive and Mutually Exclusive
- Provide a “menu” from which operations can choose required capabilities

- Derive business effects from capabilities
- Link capabilities to effects
- Explicitly identify cross links and interdependencies between capabilities
- Highlight “enabler” capabilities

Ukuran Kapabilitas

Program Maturity Assessment Events	What are the maturity assessment points along the way to completion?
Significant Accomplishments	What accomplishments must take place in order for this maturity to have occurred?
Accomplishment Criteria	What is the evidence that the accomplishments occurred?
Tasks	What effort must take place for the accomplishments to have be completed?

- Functional or feature planning does not deliver the real value to the business units
  - Features are not connected to strategy
    - Balanced Scorecard connections are capabilities not features
    - Testing strategy involves a capabilities impact not the presence of a feature
  - Features are not connected to business value
    - Business strategy is tested through scenarios and capabilities
    - Delivered value results from the use of a capability in a scenario
- Plan the delivery of capabilities rather than the delivery of features and functions
- Features and functions are the raw materials of Capabilities
- Capabilities enable the delivery of the strategy

Program Events

- Program Events are Celebratory Opportunities along the path to maturity
  - Significant accomplishments enable a new capability that supports a strategy
  - The maturity of the derived effects are assured through the assessment of the Significant Accomplishment

Significant Accomplishments

- A Capability is the deployment or delivery of a feature or function in support of a business process, product or service initiative
- Significant Accomplishments deliver this capability
- Stating the needed maturity connects the capability with strategy

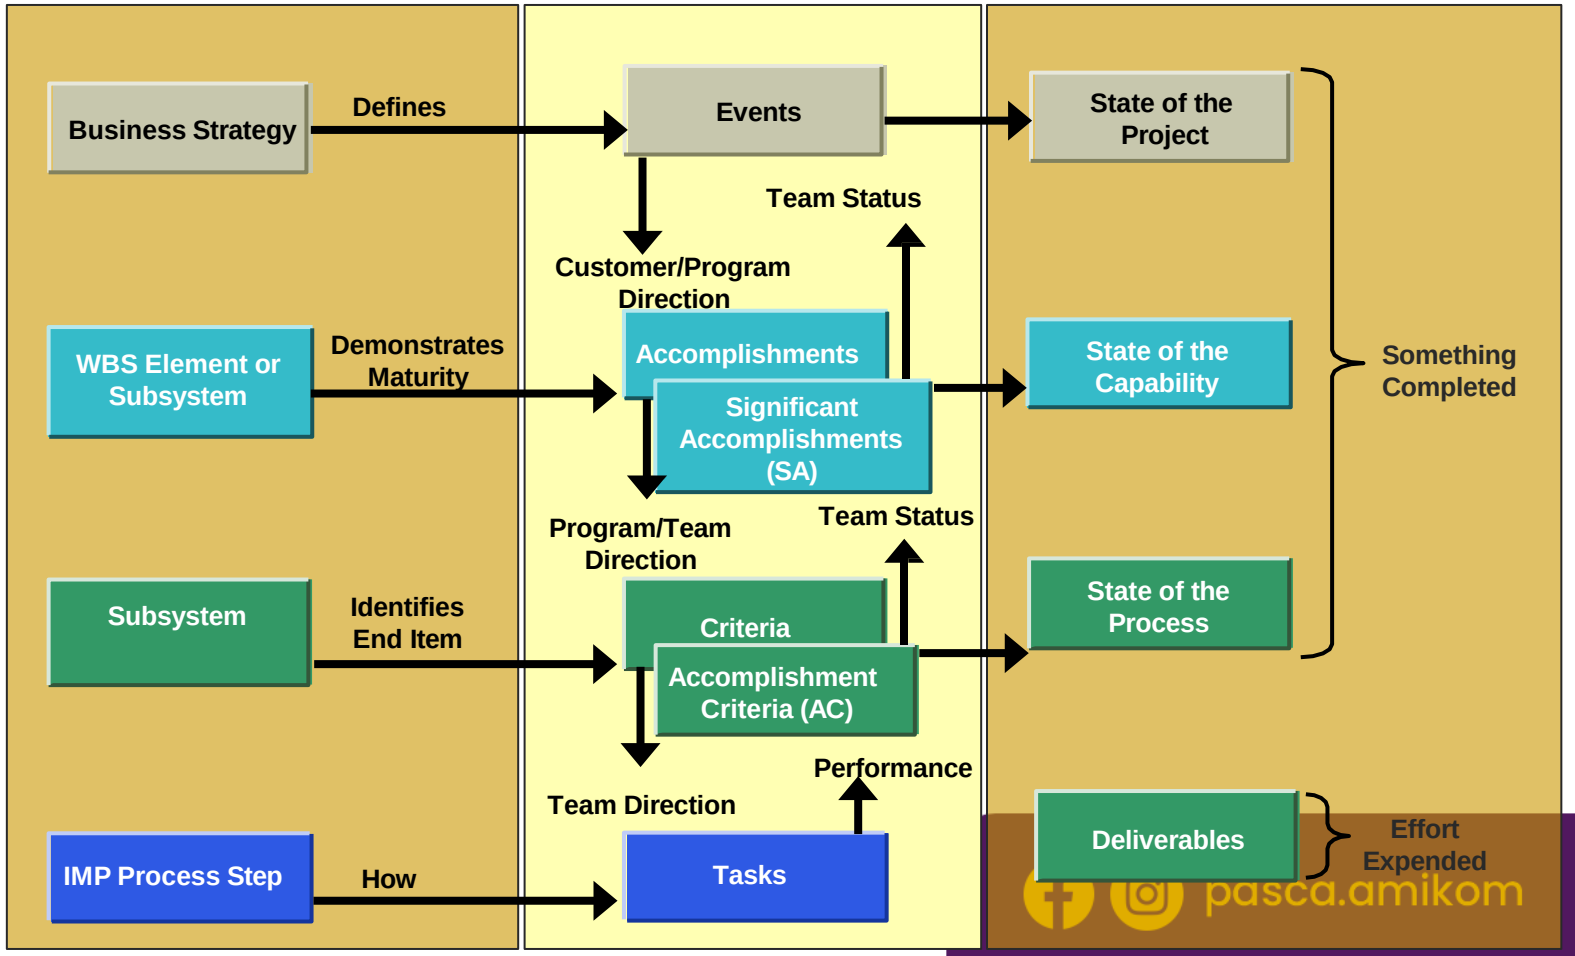

Accomplishment Criteria

- Exit criteria are the evidence that the significant accomplishment has been achieved
- The gathering and assessment of the Balance Scorecard KPI in support of a Significant Accomplishment

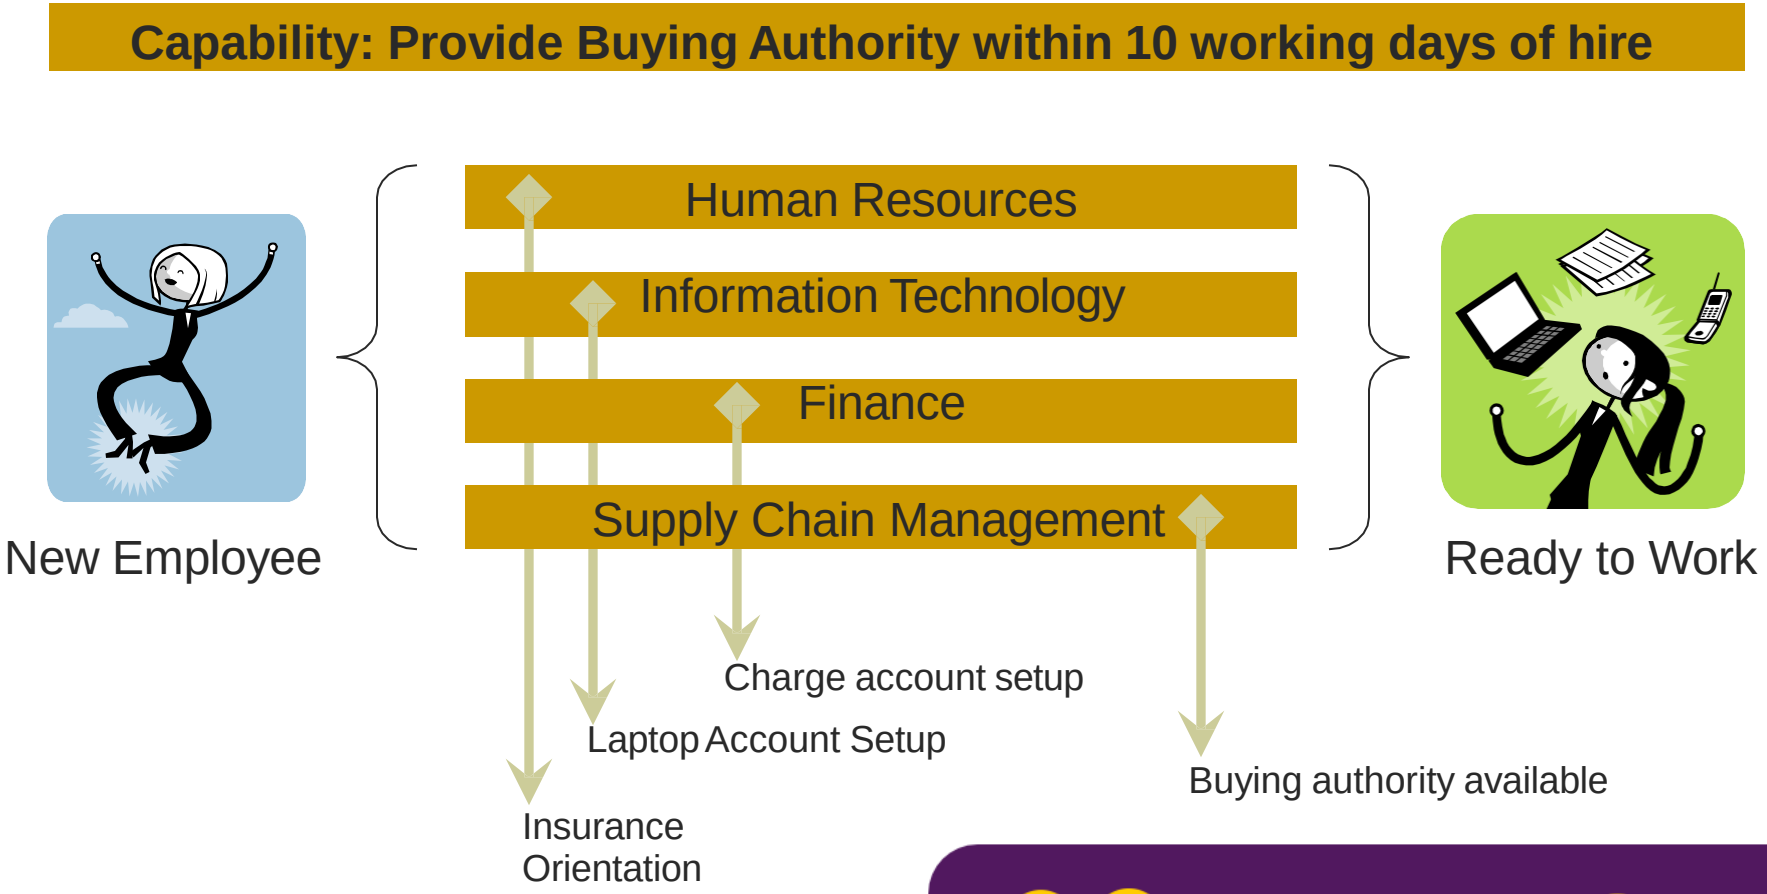

Task

- The effort expended to deliver the Accomplishment Criteria in support of the Significant Accomplishment
- Short duration activities (20 to 40 working days) with clearly defined deliverables
  - 0% or 100% credit for the deliverables
  - No partial completion of tasks
  - Predefined technical outcomes

Management—Events, SA, AC

Contoh

Capability: Provide Buying Authority within 10 working days of hire
Human Resources
Information Technology
Finance
Supply Chain Management
New Employee
Ready to Work
Charge account setup
Laptop Account Setup
Buying authority available
Insurance
Orientation

Maturity assessments

- Define the desired maturity points along the path to completion
- Measure the accomplishments
- Assess the effect on business improvement
- Engage all participants in a conversation about capability

- The deployment of Capabilities Based Planning is the basis of managing the deployment of Enterprise Services
- What does done look like in terms of operational capabilities?
- How can we measure the increasing maturity of Enterprise Services in terms of “done,” rather than the passage of time?
- How can the user community define their operational needs in terms of capabilities rather than features and functions?
