Management Overview

Module 1

Module Objectives

- To provide a management overview of TOGAF, an Open Group Standard.

  - The Open Group
  - The Architecture Forum
  - Why Enterprise Architecture
  - Why a framework
  - Summary

The Open Group…

- is an international vendor and technology neutral consortium that organizations rely on to lead the development of IT standards and certifications
- provides guidance and open environment to enable interoperability and vendor-neutrality
- Membership is open to all enterprises, anywhere in the world

The Open Group Members

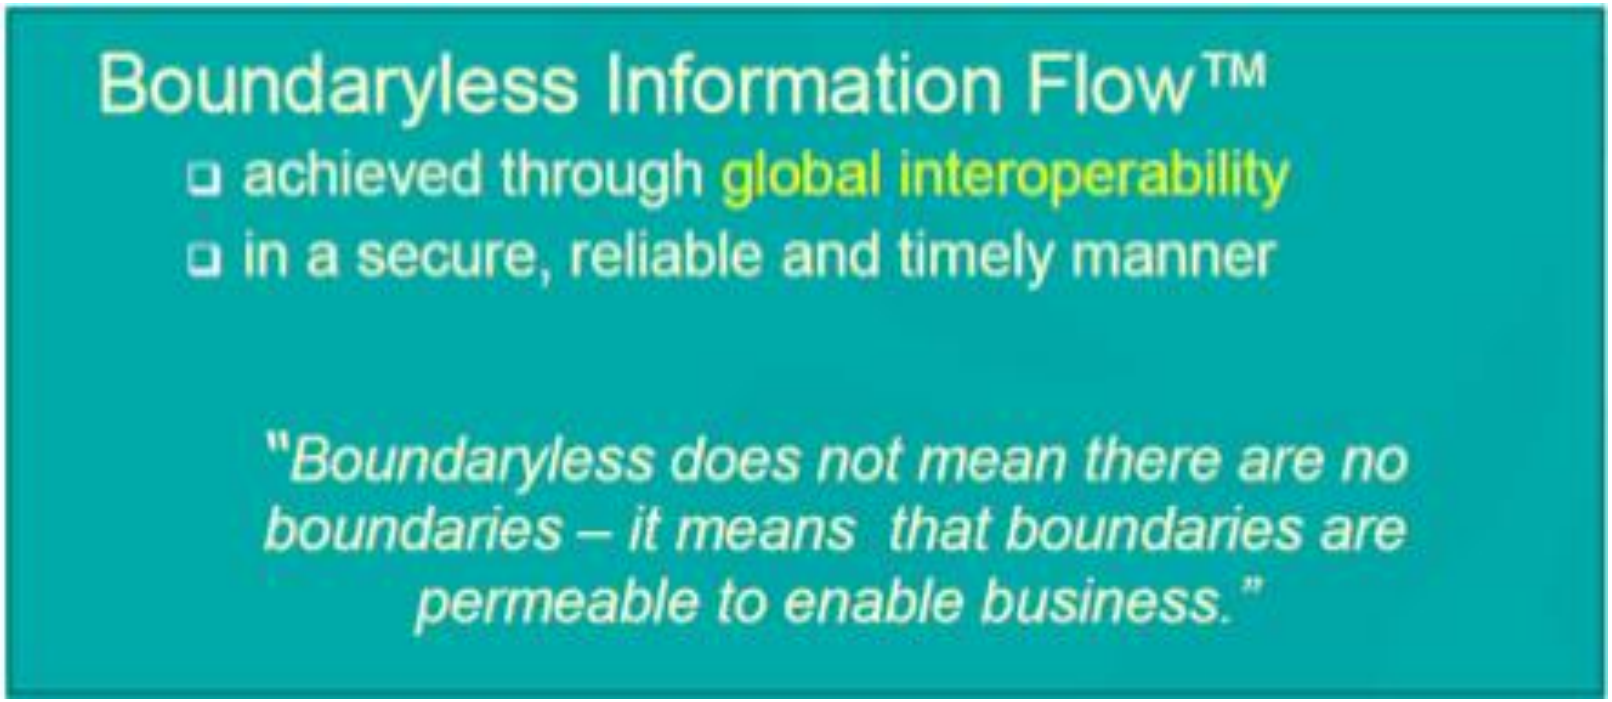

http://reports.opengroup.org/membership_report_all.pdf

The Open Group's Vision

- "access to integrated information to support business process improvements"
- desired state for an enterprise's infrastructure to support business

Activities

- Governing Board work groups
  - Open CA (Certified Architect) Work Group
  - Open CITS (Certified IT Specialist) Work Group, UNIX Work Group
- Member Forums
  - Architecture, Archimate
  - Enterprise Management, Trusted Technology
- Work Groups
  - Business Architecture
  - Cloud Computing

Architecture Forum - Mission

- The mission of The Open Group Architecture Forum is to advance the vision of Boundaryless Information Flow, for and between enterprises

- Through a set of programs that focus on all architectural aspects, including
  - providing leadership to EA community
  - validating, publishing best practices for EA
  - initiating and managing programs to support these activities

What is an Enterprise?

- A collection of organizations that share a common set of goals
- Large corporations may include multiple enterprises
- “Extended Enterprise” may include partners, suppliers and customers

What is an Architecture?

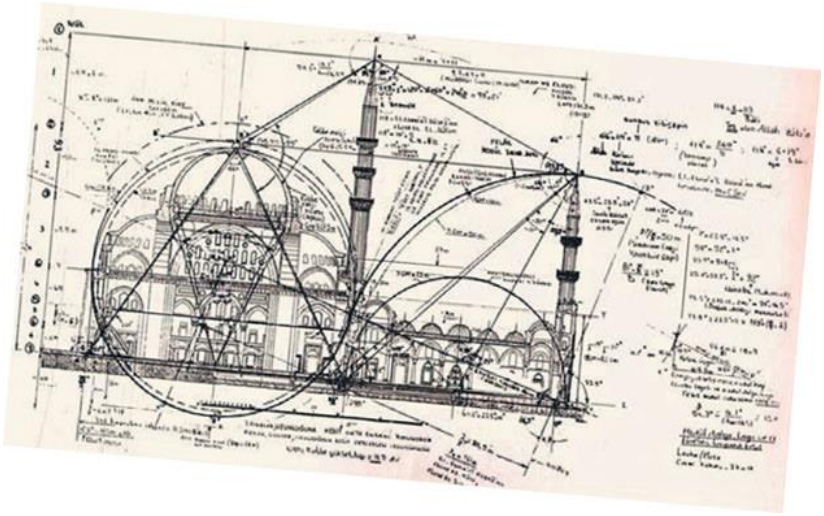

- An Architecture is the fundamental organization of something embodied in
  - its components
  - their relationships to each other and the environment
  - and the principles governing its design and evolution

What is Enterprise Architecture?

- An **enterprise architecture (EA)** is a conceptual blueprint that defines the structure and operation of an organization.

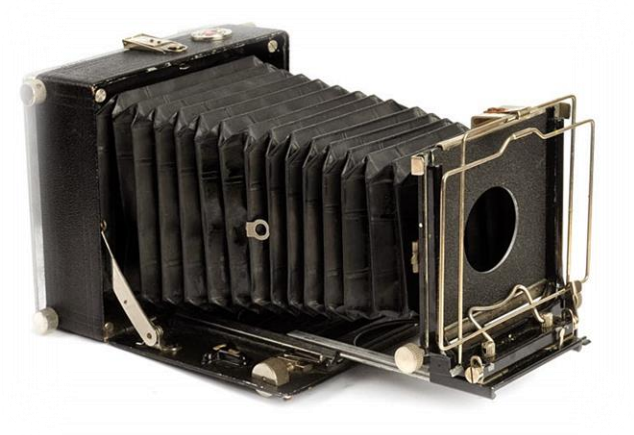

- The intent of an EA is to determine how an organization can most effectively achieve its current and future objectives.

What is Enterprise Architecture?

- Videos with regards to enterprise architecture

EA in a Nutshell…

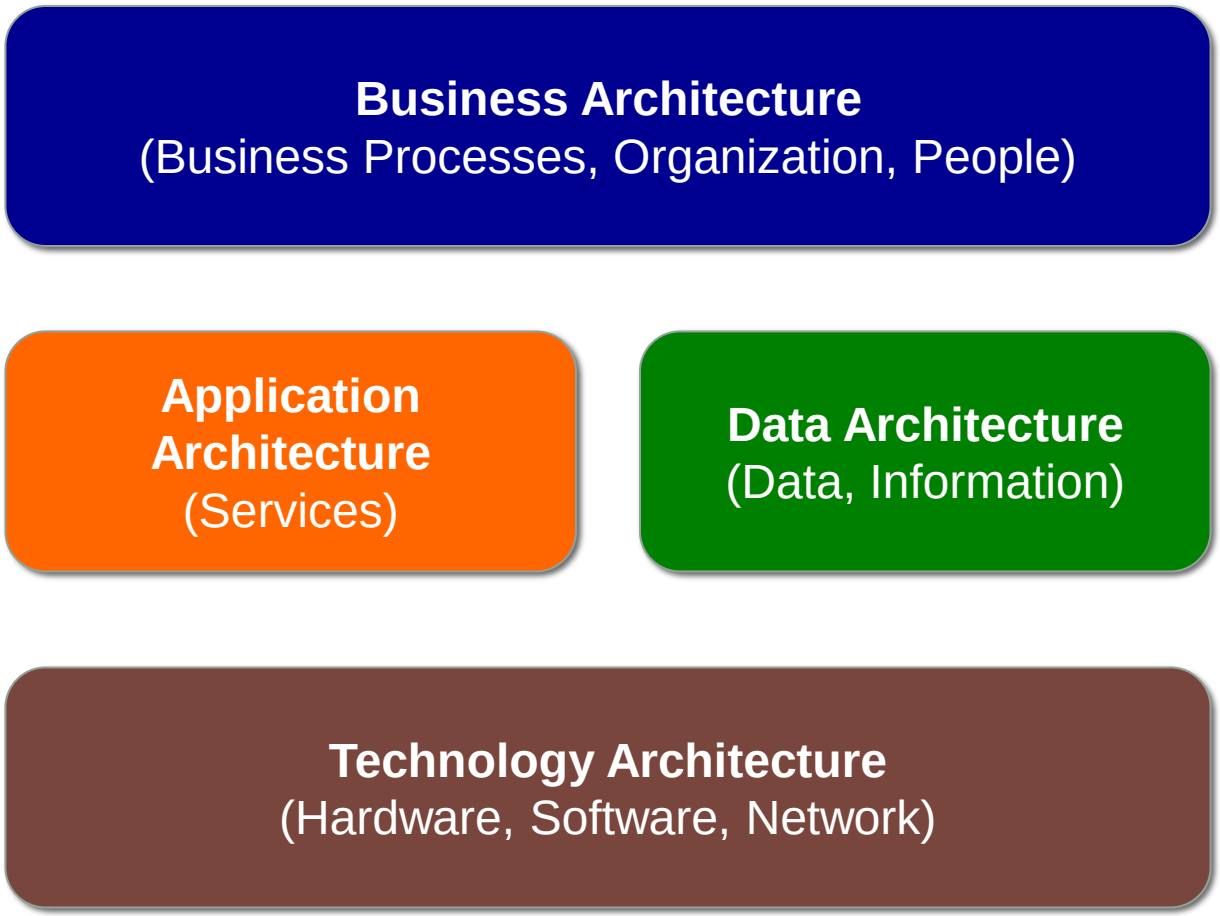

AS IS

TO BE

Architecture Domains

Why Enterprise Architecture?

- Effective management and exploitation of information through IT is key to business success
- Good information management = competitive advantage
- Current IT systems
  - fragmented, duplicated
  - poorly understood, not responsive to change
  - tactical developments rather than a strategic plan

Pressure to Develop EA

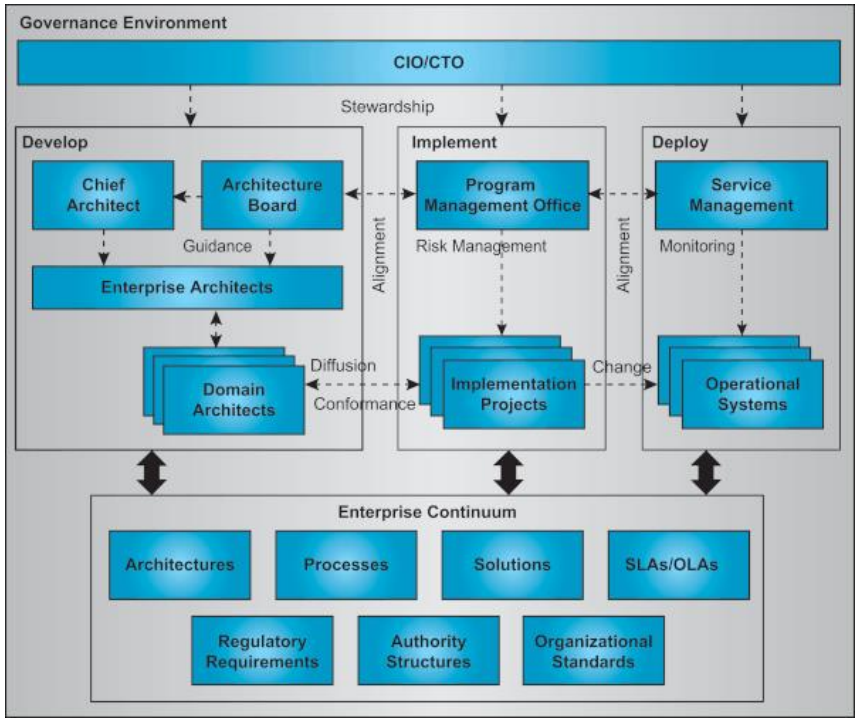

- Laws and regulations
  - Clinger-Cohen Act, Sarbanes-Oxley
- More extended enterprises
- Audit requirements
- Greater publicity to failures
- More focus on IT

Business Benefits of EA

- A more efficient business operation
- A more efficient IT operation
- Better return on existing investment
- Reduced risk for future investment
- Faster, simpler and cheaper procurement

The Importance of Governance

- An EA is only as good as the decision making framework that is established around it
- The Governance Framework depends on
  - clear authority structure
  - the right participants

- Who is responsible? Who is involved? Who is accountable?

What is an Architecture Framework?

- A conceptual structure used to develop, implement and sustain an enterprise architecture
- It should include
  - a method for designing target state of the enterprise using building blocks showing their interactions
  - a set of tools and a common vocabulary
  - recommended standards and compliant tools to implement the building blocks

The Value of a Framework

- Provides a practical starting point for any project
  - avoids the initial panic
  - capture what others have found in real life
  - contains a baseline set of resources for reuse

TOGAF Scope

- TOGAF emphasizes business goals as architecture drivers, and provides a repository of best practice, including
  - TOGAF Architecture Development Method (ADM)
  - ADM Guidelines & Techniques
  - TOGAF Architecture Content Framework
  - Enterprise Continuum
  - TOGAF Reference Models
  - TOGAF Capability Framework

Summary

- **T**he **O**pen **G**roup **A**rchitecture **F**ramework
- An effective, industry standard framework and method for enterprise architecture
- Complementary to, not competing with, other enterprise frameworks
- A repository of best practice
- Vendor, tool and technology neutral
- A framework and method for achieving the "Boundaryless Information Flow" vision
