Stakeholder Management

Module 11

Module Objectives

- Explain how to apply the stakeholder management technique
- Understand the steps in developing a stakeholder map and how to use the map
- Understand the benefits for creating views and relating those to stakeholder and their concerns

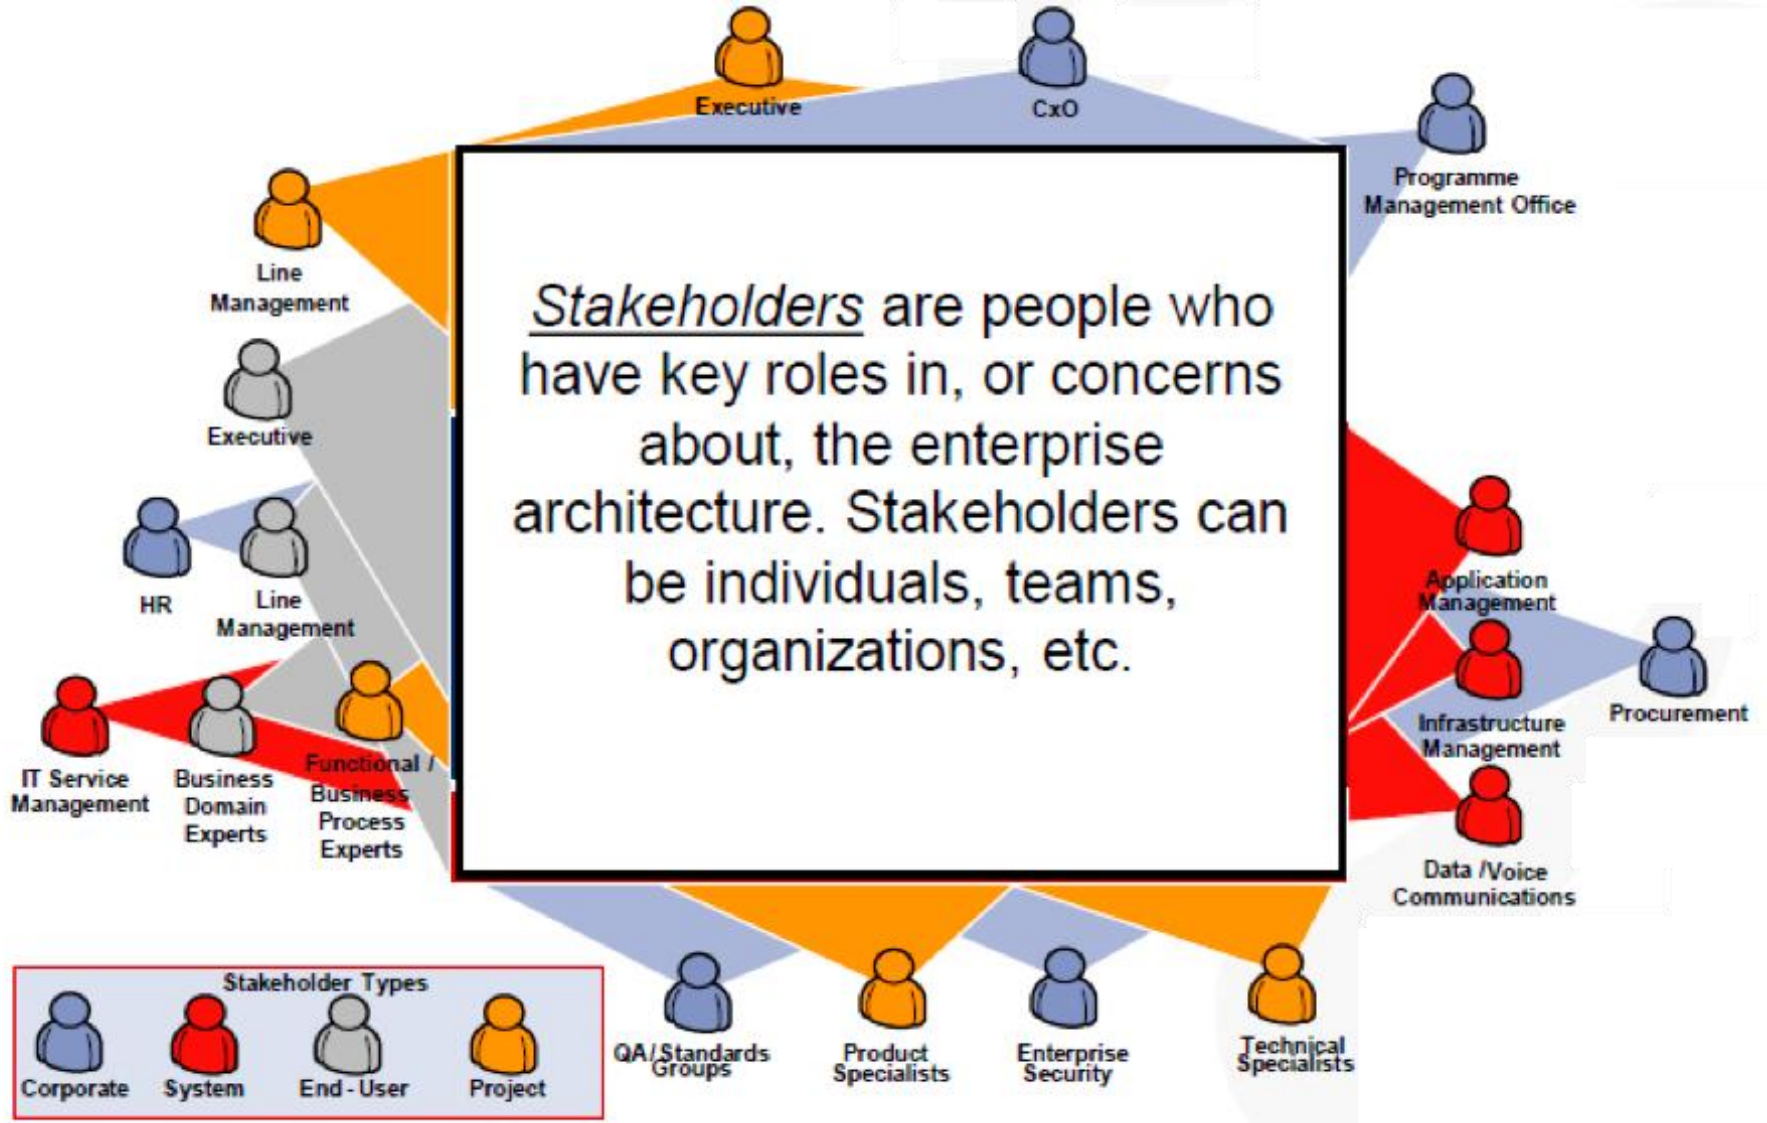

Overview

- Stakeholder Management is an important discipline that successful architecture practitioners can use to **win support** form others
- This technique should be used in Phase A to identify key players and updated throughout each phase
- The output of this process forms part of the **Communications Plan**

Benefits

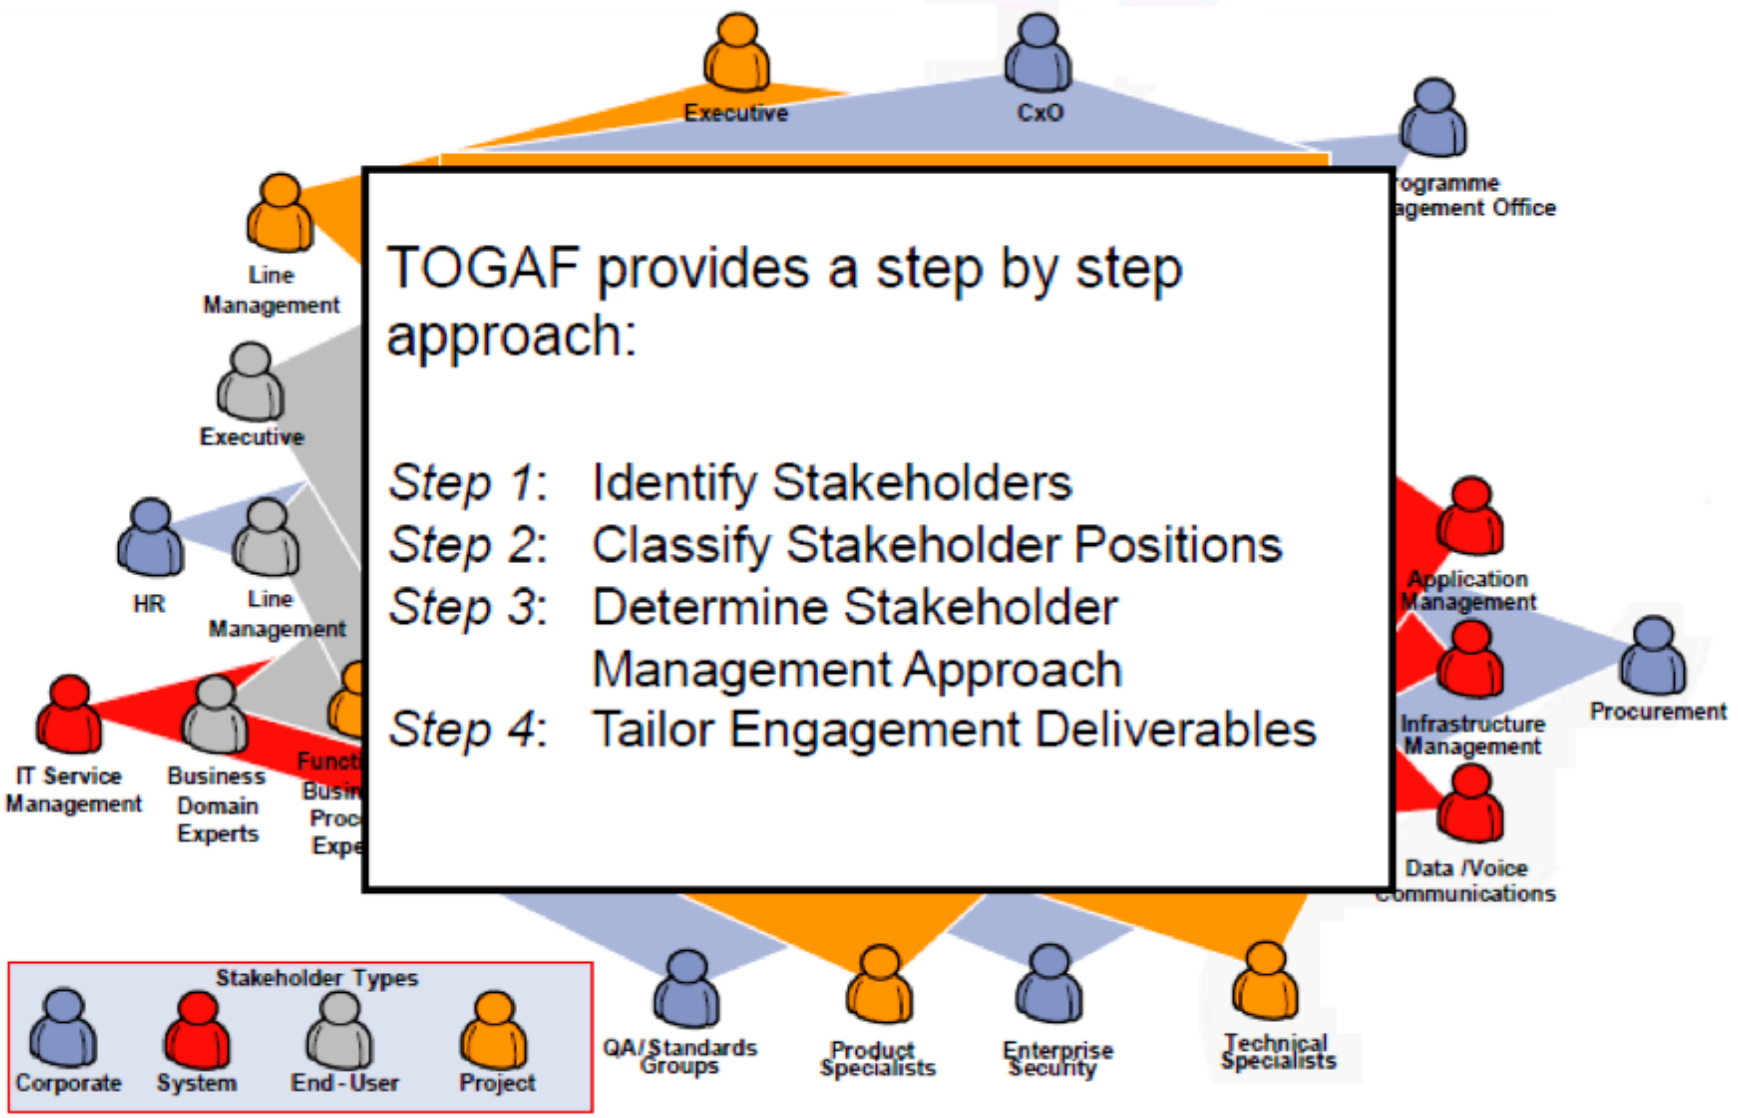

- Identifies the most **powerful stakeholders** early and ensures their input is used to shape the architecture
- Achieving support from the most powerful stakeholders can help achieve **necessary resource**
- Early communication with stakeholders helps ensuring all **understand the architecture** process and are engaged in it
- Can be used to anticipate **likely reactions** and develop a strategy to address them
- Can be used to **identify conflicting** or competing objectives amongst stakeholders and develop strategies to manage

Stakeholders

Stakeholders are people who have key roles in, or concerns about, the enterprise architecture. Stakeholders can be individuals, teams, organizations, etc.

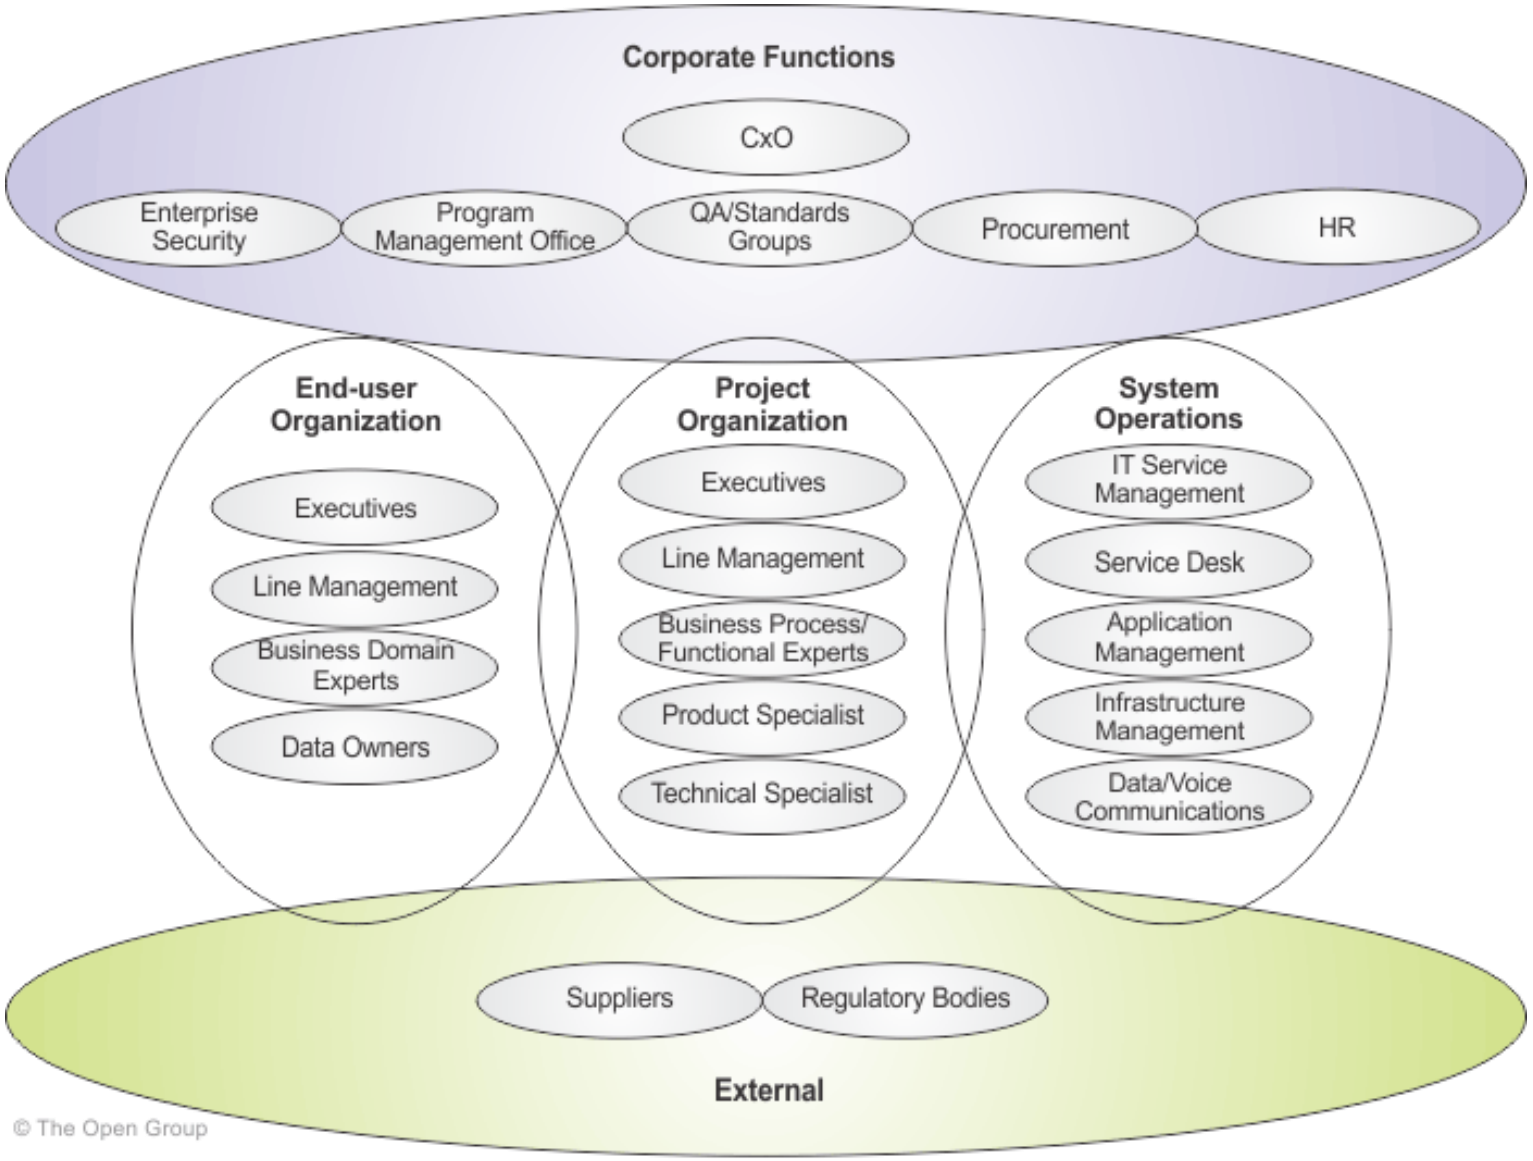

Stakeholder Management

Step 1: Identify Stakeholders

- Identify **the key** stakeholders of the EA
- Look at who is impacted by the EA project
  - Who **gains** and who loses?
  - Who controls change?
  - Who design new systems?
  - Who is the **decision maker**?
  - Who decides what to **buy**?
  - Who controls resource?
  - Who has specialist skills the project need?
  - Who has **influence**?

Categories of Stakeholders

Step 2: Classify Stakeholder Positions

- Classify and record positions in a **Stakeholder Analysis Matrix**

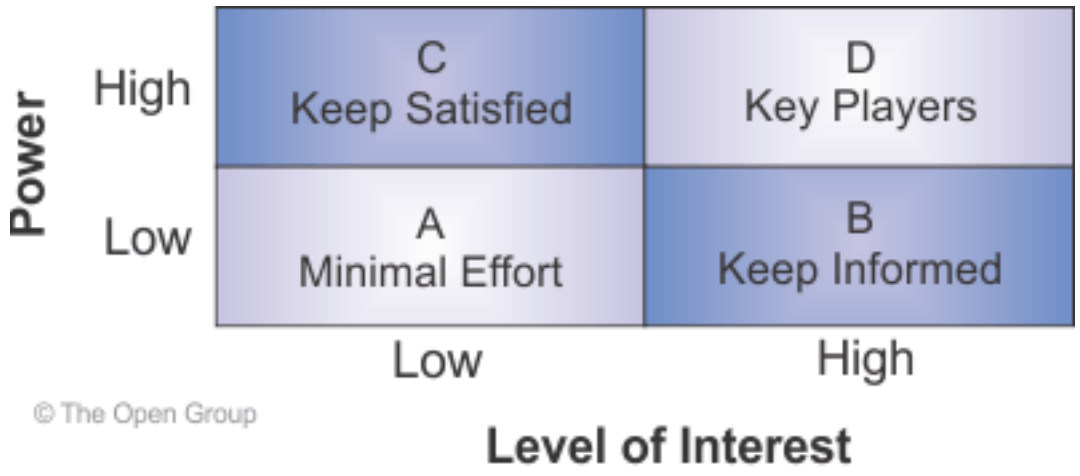

Stakeholder Group	Stakeholder	Ability to Disrupt Change	Current Understanding	Required understanding	Current commitment	Required commitment	Required support
CIO	John Smith	H	M	H	L	M	H
CFO	Jeff Brown	M	M	M	L	M	M

Step 3: Determine Approach

- Work out stakeholder **power**, **influence** and **interest**, so as to focus the engagement on the key individuals
- These can then be mapped onto a **power/interest matrix**, which is used to determine the stratgey for engaging with them

Step 3: Determine Approach

- Develop a **Power/Interest Matrix** and place stakeholder groups with it

© The Open Group

Step 4: Tailor Engagement Deliverables

- For each Stakeholder Group
  - Identify the **viewpoints** that the architecture engagement needs to **produce** and **validate** with each stakeholder group
  - Define specific **viewpoints**, **matrices**, and **views** of the enterprise architecture model

Example: Stakeholder Map

STAKEHOLDER GROUP	CLASS	EXAMPLE ROLES	KEY CONCERNS	CLASS	Catalogs, Matrices and Diagrams
Corporate Functions	CxO	CEO, CFO, CIO, COO	The high level drivers, goals and objectives of the organization, and how these are translated into an effective process and IT architecture to advance the business.	KEEP SATISFIED	Business Footprint diagram Goal/Objective/Service diagram Organization Decomposition diagram
Corporate Functions	Program Management Office	Project Portfolio Managers	Prioritizing, funding and aligning change activity. An understanding of project content and technical dependencies between projects adds a further dimension of richness to portfolio management decision making.	KEEP SATISFIED	Requirements Catalog Business Footprint diagram Application Communication diagram Functional Decomposition diagram
Corporate Functions	Procurement	Acquirers	Understanding what building blocks of the architecture can be bought, and what constraints (or rules) exist that are relevant to the purchase. The acquirer will shop with multiple vendors looking for the best cost solution while adhering to the constraints (or rules) applied by the architecture, such as standards. The key concern is to make purchasing decisions that fit the architecture, and thereby to reduce the risk of added costs arising from non-compliant components.	KEY PLAYERS	Technology Portfolio Catalog Technology Standards Catalog

Summary

- Stakeholder Management is an important discipline that successful architecture practitioners can use to **win support** from others
- Identifies the **most powerful stakeholders** early and ensures their input is used to shape the architecture
- Explicitly identifies viewpoints to address **stakeholder concerns**
