Phase A
Architecture Vision

Module 15

Module Objectives

Understand Phase A

- Objectives
- Approach
- Steps
- Inputs
- Outputs

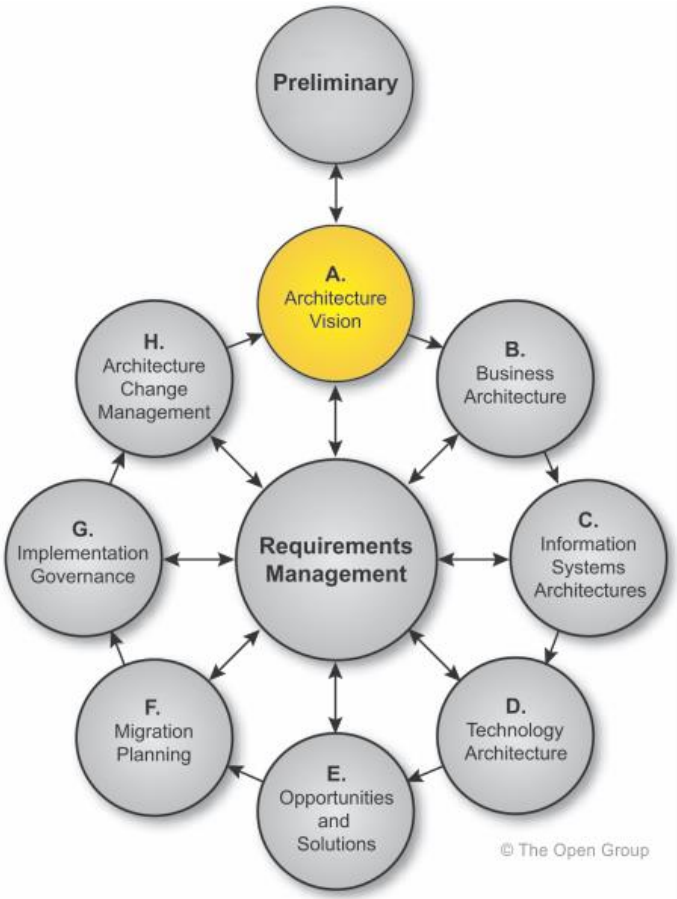

Architecture Vision - Objectives

- Develop a **high-level aspirational vision** of the capabilities and **business value** to be delivered as a result of the proposed enterprise architecture
- Obtain approval for a **Statement of Architecture Work** that defines a program of works to develop and deploy the architecture outlined in the Architecture Vision

Approach

- Phase A defines **what is** in and **what is outside** of the architecture effort, and the constraints
- Constraints are informed by **principles**, **business goals** and **strategic drivers**
- Creates the **Architecture Vision** document
  - Clarifying and agreeing the purpose of the architecture
  - Demonstrating how it will be achieved
  - A first high-level description pf the Baseline and Target architectures
  - The business scenarios technique can be used to develop the Architecture Vision

Phase A: Inputs

- **Request for Architecture Work**
- Business principles, **business goals** and drivers
- Organization model for enterprise architecture
- Tailored Architecture Framework, including **architecture principles**
- Populated **Architecture Repository**

Request for Architecture Work

- Organization **Sponsors**
- Mission Statement
- Business goals and changes
- **Strategic plans** of the business
- **Time limits**
- Changes in the business environment
- Organizational **constraints**
- Budget information, financial constraints
- External, business constraints
- Current business system description
- Current architecture/IT **system description**
- Description of developing organization
- Description of **resources** developing organization has available

Steps

1. Establish the architecture project
2. Identify stakeholders, concerns and business requirements
3. Confirm business goals, drivers and constraints
4. Evaluate business capabilities
5. Assess readiness for business transformation
6. Define scope
7. Confirm and elaborate architecture and business principles
8. Develop Architecture Vision
9. Define the Target Architecture value propositions and KPIs
10. Identify the business transformation risks and mitigations
11. Develop Statement of Architecture Work; secure approval

Step 1: Establish the project

- Conduct the necessary procedures to secure
  - **Recognition** of the project
  - **Endorsement** of corporate management
  - Support and **commitment** of line management
- Refer to **other management frameworks**
  - Explain how this project relates to those frameworks

Step 2: Identify stakeholders, concerns and business requirements

Here we must identify

- Candidate **vision components** and requirements
- Candidate **scope boundaries** for the engagement
- Stakeholder **concerns**, issues and cultural factors
- The concerns and **viewpoints** that are relevant to this project
- The stakeholders that are involved with the project
- The key roles and responsibilities within the project

Another key task will be to consider which **architecture views** and **viewpoints** need to be developed to satisfy the various stakeholder requirements

Stakeholder Map

STAKEHOLDER GROUP	CLASS	EXAMPLE ROLES	KEY CONCERNS	CLASS	Catalogs, Matrices and Diagrams
Corporate Functions	CxO	CEO, CFO, CIO, COO	The high level drivers, goals and objectives of the organization, and how these are translated into an effective process and IT architecture to advance the business.	KEEP SATISFIED	Business Footprint diagram Goal/Objective/Service diagram Organization Decomposition diagram
Corporate Functions	Program Management Office	Project Portfolio Managers	Prioritizing, funding and aligning change activity. An understanding of project content and technical dependencies between projects adds a further dimension of richness to portfolio management decision making.	KEEP SATISFIED	Requirements Catalog Business Footprint diagram Application Communication diagram Functional Decomposition diagram
Corporate Functions	Procurement	Acquirers	Understanding what building blocks of the architecture can be bought, and what constraints (or rules) exist that are relevant to the purchase. The acquirer will shop with multiple vendors looking for the best cost solution while adhering to the constraints (or rules) applied by the architecture, such as standards. The key concern is to make purchasing decisions that fit the architecture, and thereby to reduce the risk of added costs arising from non-compliant components.	KEY PLAYERS	Technology Portfolio Catalog Technology Standards Catalog

Step 3: Confirm business goals, drivers and constraints

- Identify the **business goals** and **strategic drivers** of the organization
- If these have been defined elsewhere ensure that definitions are **current** and clarify any areas of ambiguity
- Otherwise, define the goals and secure their **endorsement** by management
- Define any constraints that must be dealt with

Step 4: Evaluate business capabilities

- Seek to understand the **capabilities** and **desires** of the business
- Identify options to realize those capabilities
- Assess the implications for the organization's architecture capability
- Create an initial picture of the new capability that will be required
- Document the results in a Capability Assessment

Step 5: Assess readiness for business transformation

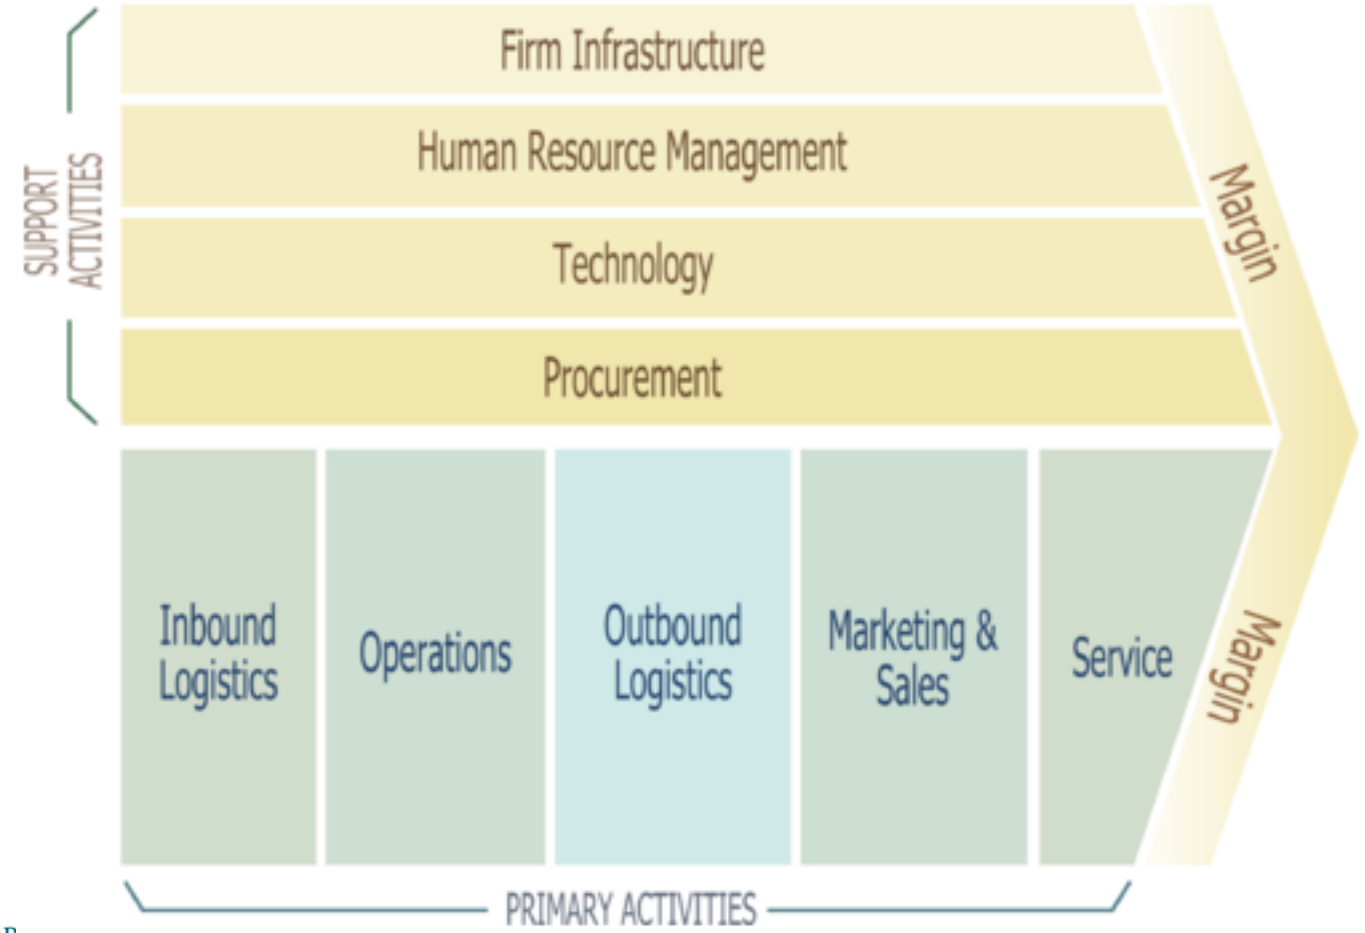

- This assessment is based upon the determination and rating of a series of **readiness factors**

These results are then used to

- shape the **scope** of the architecture
- identify activities required within the architecture project
- Identify **risk areas** to be addressed

Value Chain Diagram

Value Chain Diagram maps **value creation** within an organization.

THE Open GR

Step 6: Define the Scope

- **Breadth** of coverage
- **Level** of detail
- The partitioning characteristics of the architecture
- **Domains** to be covered
- Schedule **project milestones**
- Identify **Enterprise Continuum assets** for use
  - Created from previous ADM cycles
  - Existing reference frameworks, models, and so on…

Step 7: Confirm and elaborate architecture and business principles

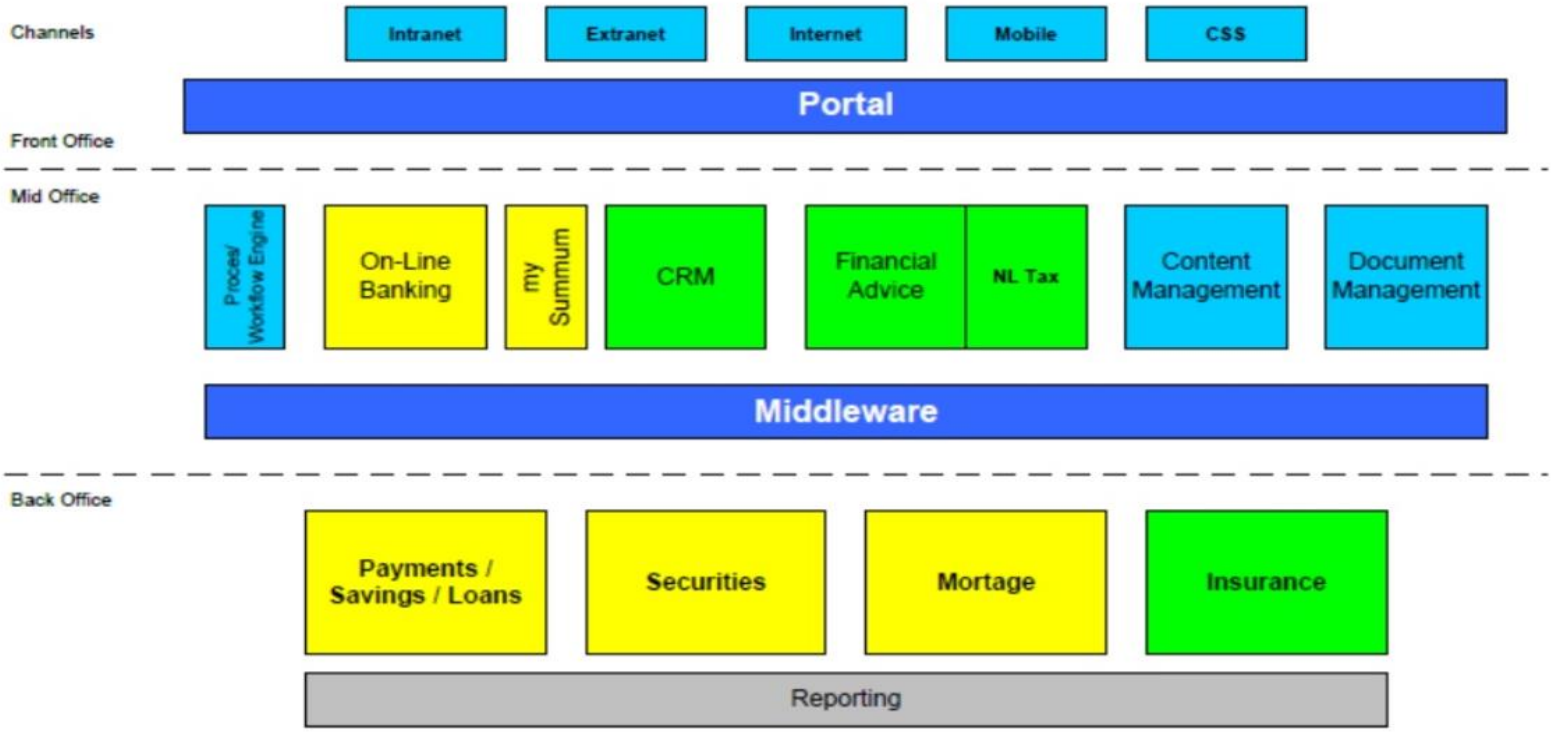

- Ensure that any existing definitions are current, and clarify any areas of ambiguity
- If principles do not exist, go to the body responsible for architecture governance and together define the **principles**
- Secure their **endorsement** by management

Step 8: Develop Architecture Vision

- Create a high-level view of the **Baseline** and **Target Architectures**
- Informal techniques are often used e.g. a simple solution concept diagram can illustrate the **main components of the solution** and its advantages
- **Business scenarios** are useful here for discovering and documenting business requirements
- The result is the first, **very high-level definition** of the baseline and target environments, from a business, IS and technology perspective
- This should be stored in the **Architecture Repository**

Solution Concept Diagram

- A **high-level represe**ntation of the solution envisaged
- A ***pencil sketch*** of the expected solution at the outset of the engagement

Step 9: Define the Target Architecture value propositions and KPIs

- Develop **the business case** for the architectures and changes required
- Produce the **value proposition** for each of the stakeholder groupings
- Assess and define the procurement requirements
- Review and agree the value propositions with the sponsors and stakeholders
- Define the **performance metrics**
- Assess the **business risk**
- Incorporate the outputs in the **Statement of Architecture work**

Step 10: Identify the Business Transformation Risks and Mitigation Activities

- Identify **the risks** associated with the **Architecture Vision**, assess the initial level of risk and its potential frequency. There are two levels of risk to consider
  - **Initial Level of Risk:** Risk categorization prior to determining and implementing mitigating actions
  - **Residual Level of Risk:** Risk categorization after implementation of mitigating actions
- Assign a mitigation strategy for each risk. These should be considered for inclusion within the Statement of Architecture Work

Step 11: Develop Statement of Architecture Work; Secure approval

- **Assess the work products** that are required to be produced against the set of business performance requirements

Activities will include

- Identify **new work products** that need to changed
- Provide direction on which existing work products, including **building blocks**, need to be changed. Ensure that all dependencies are coordinated
- Identify the **impact of change** on other work products
- Choose which **architecture domains** to develop , depending on purpose, focus, scope, constraints

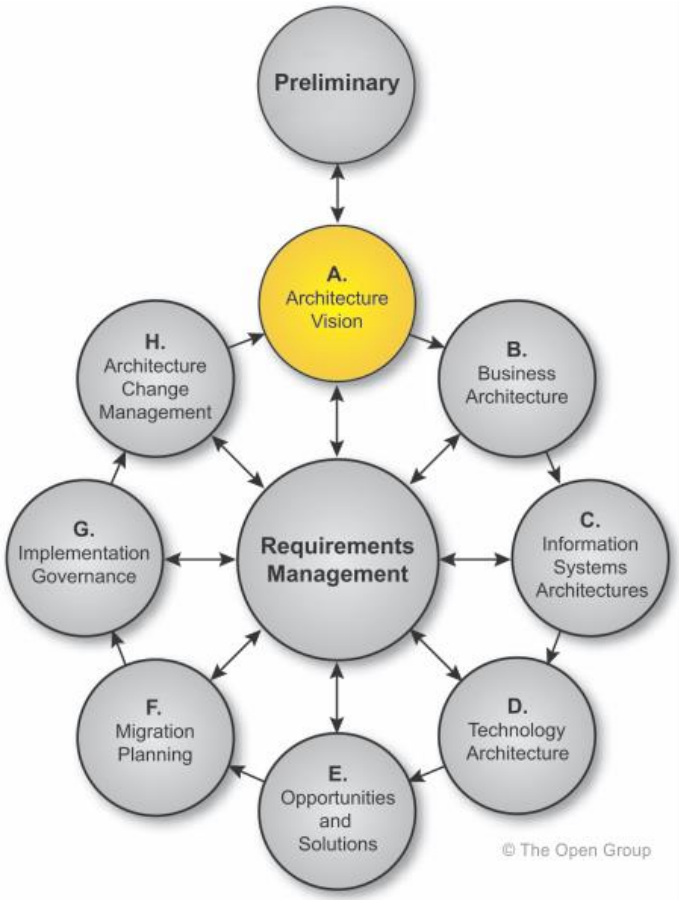

Step 11: Develop Statement of Architecture Work; Secure approval

- Assess the **resource requirements**
- Estimate the resources needed, develop a roadmap and schedule for the proposed development and document in the Statement of Architecture Work
- Define the **performance metrics**
- Develop the specific EA **Communications Plan**
- Review and agree the plans with the sponsors, and secure formal approval under the appropriate governance procedures
- Gain sponsor's **sigh-off**

Statement of Architecture Work

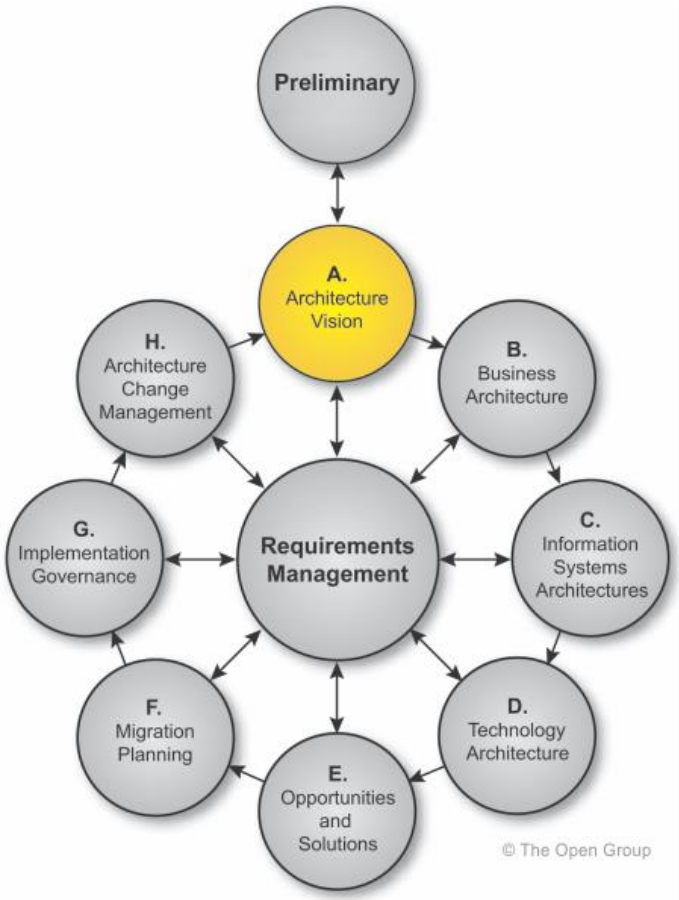

- Title
- Architecture project request and background
- Architecture project description and scope
- Overview of Architecture Vision
- Change of scope procedures
- Roles, responsibilities and deliverables
- Acceptance criteria and procedures
- Architecture project plan and schedule
- Approvals

Phase A: Outputs

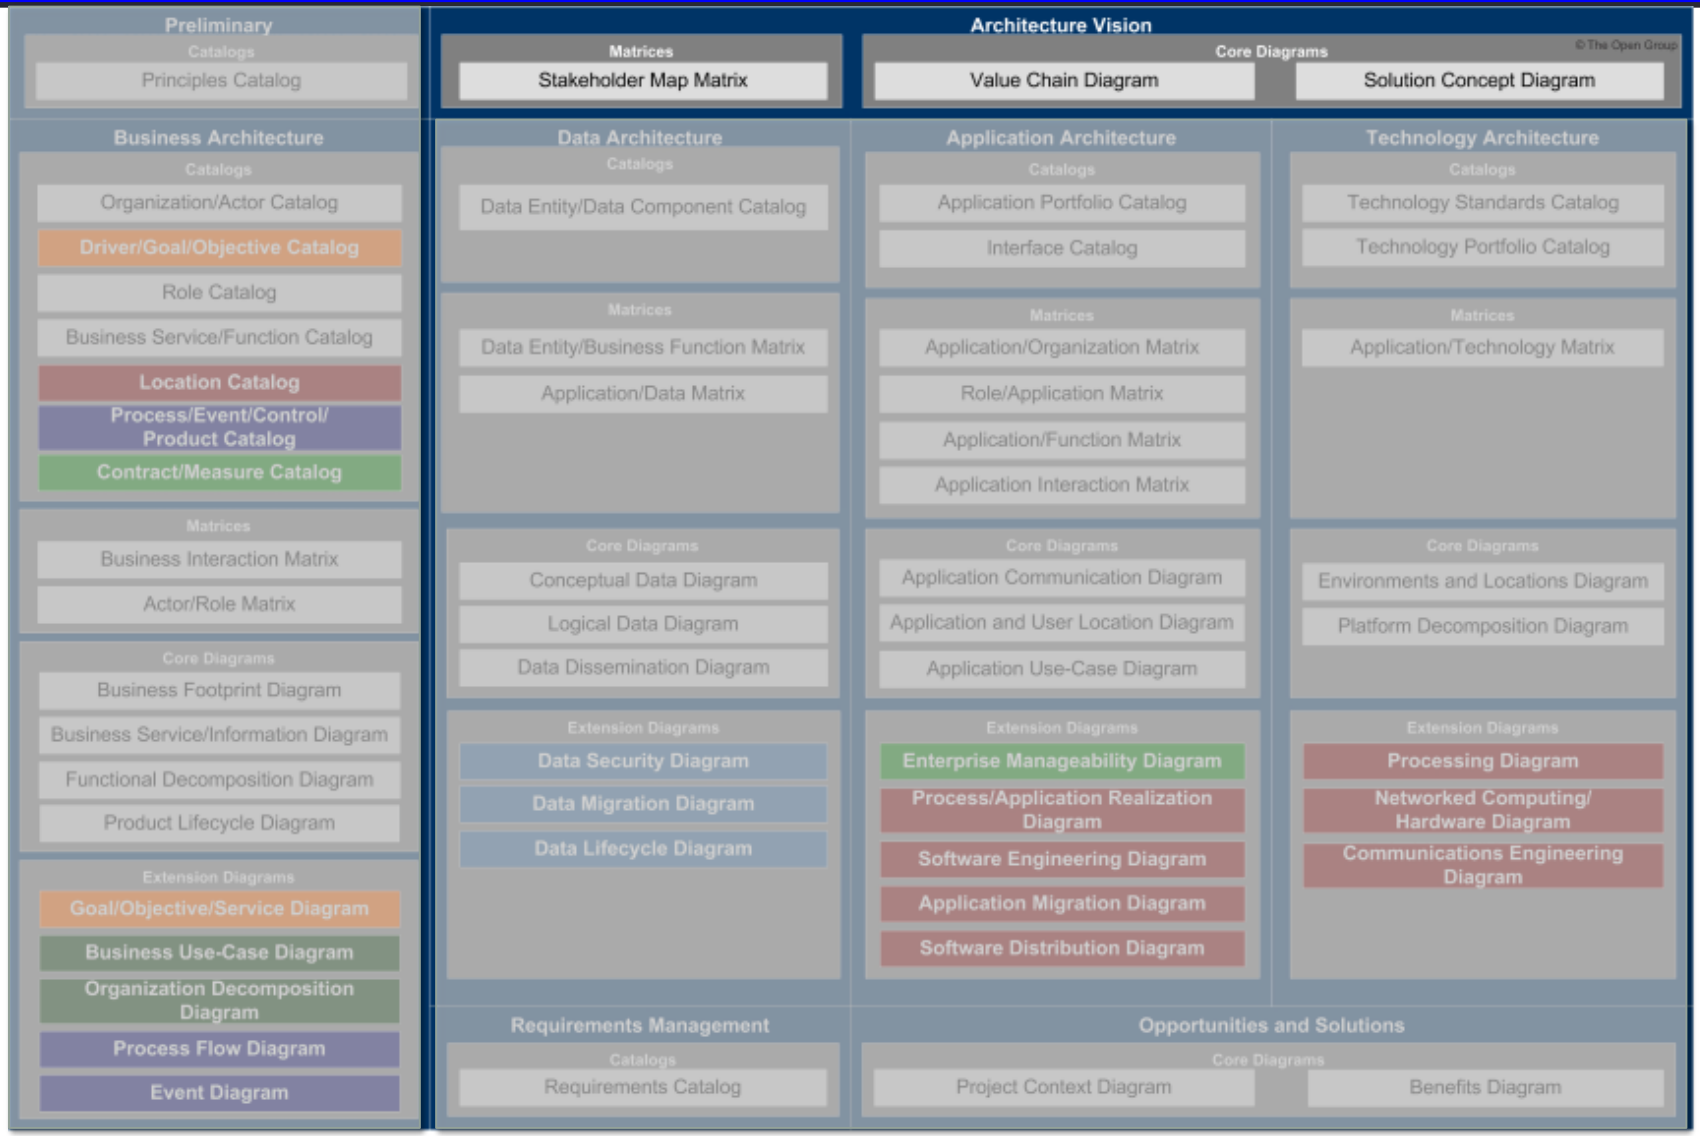

- Approved **Statement of Architecture Work** including:
  - Project description and scope
  - Overview of Architecture Vision
  - Project plan and Schedule
- Refined statements of **business principles, goals and drivers**
- **Architecture principles** including business principles

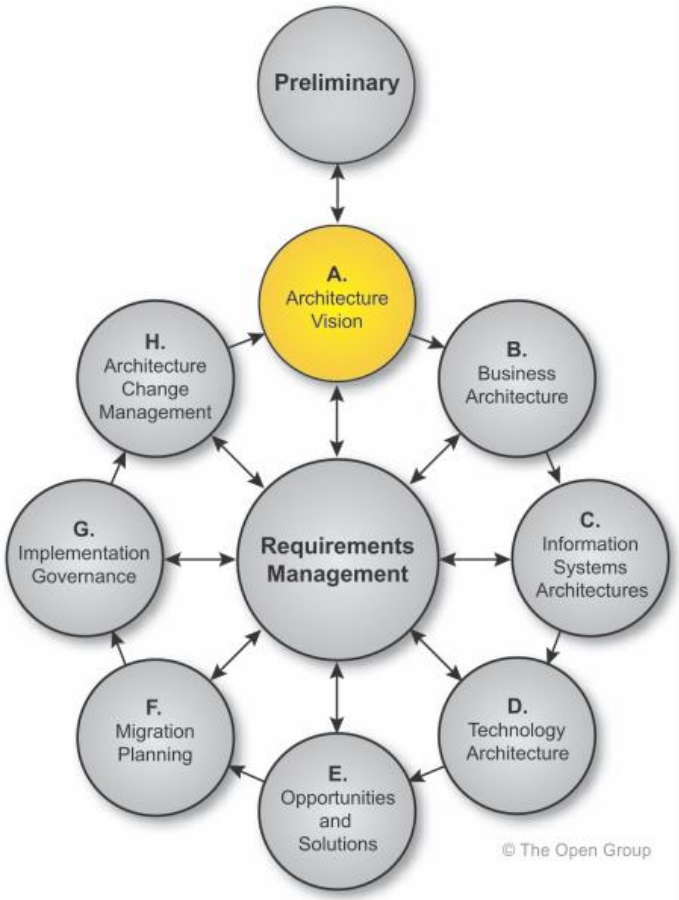

Phase A: Outputs

- **Capability Assessment**
- Tailored Architecture Framework
- **Architecture Vision**
- Draft Architecture Definition Document
- **Communications Plan**
- Additional content populating the Architecture Repository

Summary

- Phase A is about **project establishment**
- It initiates an iteration of the architecture process
- It sets the **scope**, **constraints** and **expectations** for this iteration
- It validates the business context
- It creates the **Statement of Architecture Work**

Summary

Phase A: Architecture Vision			
Objectives	**Steps**	**Inputs**	**Outputs**
Develop a high-level aspirational vision of the capabilities and business value to be delivered as a result of the proposed enterprise architecture Obtain approval for a Statement of Architecture Work that defines a program of works to develop and deploy the architecture outlined in the Architecture Vision	Establish the architecture project Identify stakeholders, concerns, and business requirements Confirm and elaborate business goals, business drivers, and constraints Evaluate business capabilities Assess readiness for business transformation Define scope Confirm and elaborate architecture principles, including business principles Develop Architecture Vision Define the Target Architecture value propositions and KPIs Identify business transformation risks and mitigation activities Develop Statement of Architecture Work; secure approval	Request for Architecture Work Business principles, business goals, and business drivers Organizational Model for Enterprise Architecture Tailored Architecture Framework, including tailored architecture method, architecture content, architecture principles, configured and deployed tools Populated Architecture Repository; that is, existing architecture documentation (framework description, architecture descriptions, existing baseline descriptions, etc.)	Approved Statement of Architecture Work Refined statements of business principles, business goals, and business drivers Architecture principles Capability Assessment Tailored Architecture Framework Architecture Vision, including: •* Refined key high-level stakeholder requirements Draft Architecture Definition Document, including (when in scope): •* Baseline Business Architecture (high-level) •* Baseline Data Architecture (high-level) •* Baseline Application Architecture (high-level) •* Baseline Technology Architecture (high-level) •* Target Business Architecture (high-level) •* Target Data Architecture (high-level) •* Target Application Architecture (high-level) •* Target Technology Architecture (high-level) Communications Plan Additional content populating the Architecture Repository
