TOGAF 9 Components

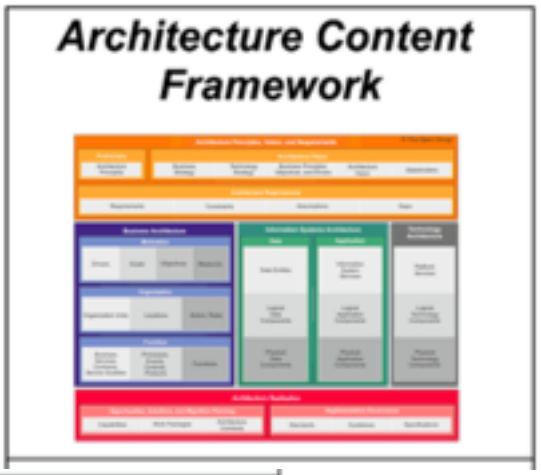

Module 2

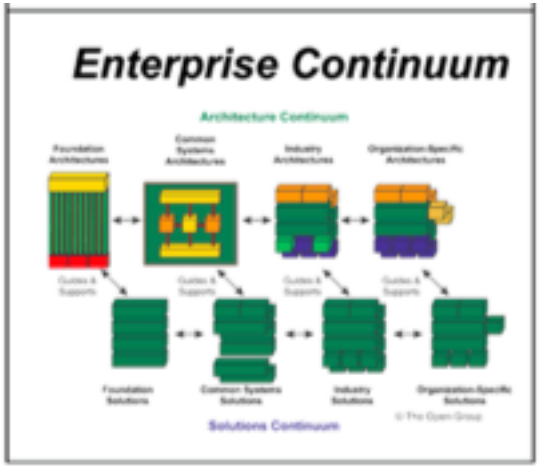

Module Objectives

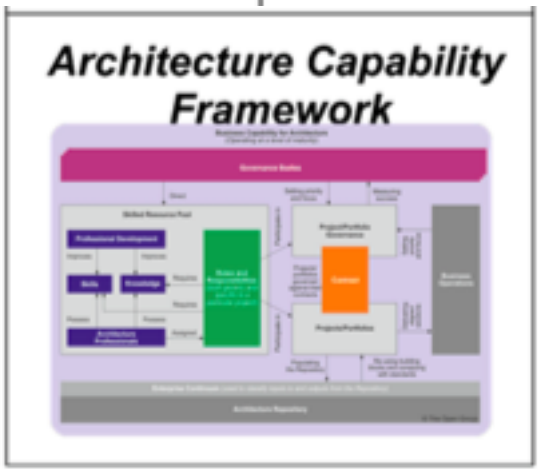

- To highlight and introduce the main components and key concepts of TOGAF 9

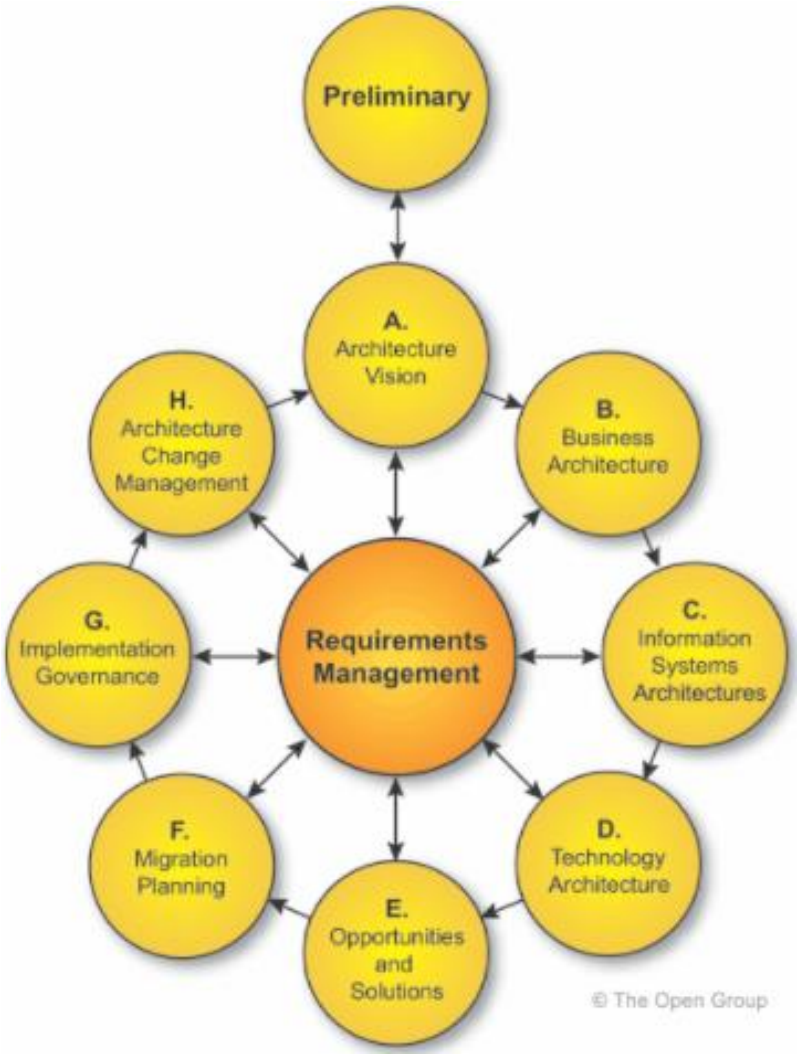

The Architecture Development Method (ADM)

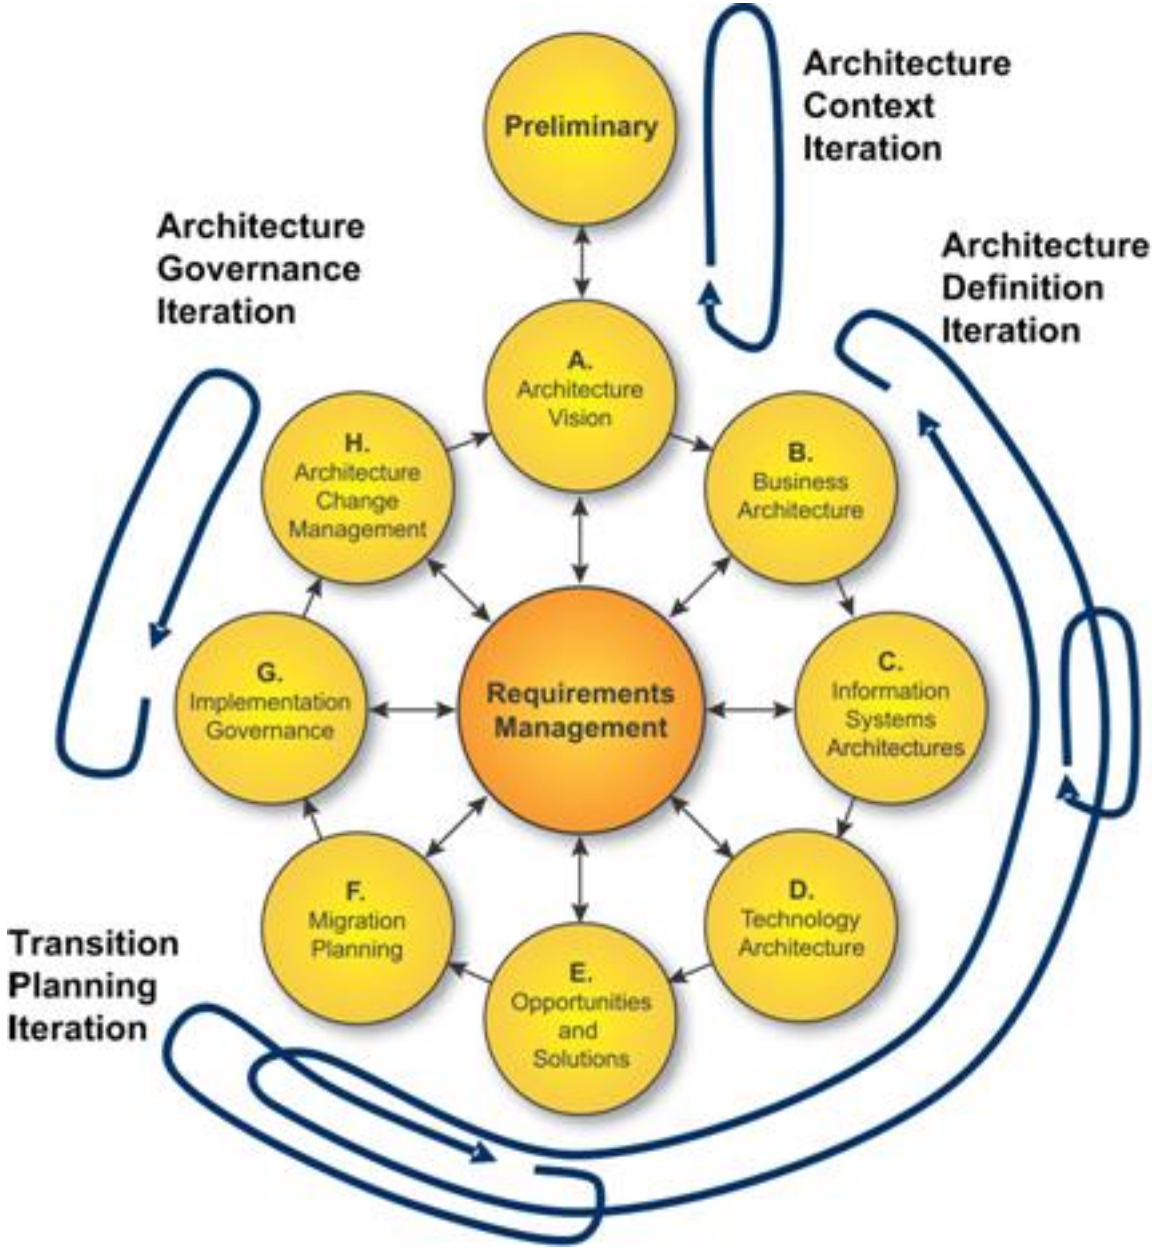

- The core of TOGAF
- A proven way of developing an architecture
- Designed to address business requirements
- An iterative method
- A set of architecture views to ensure that a complex set of requirements are adequately addressed
- Each phase includes objectives, approach, inputs, steps and outputs

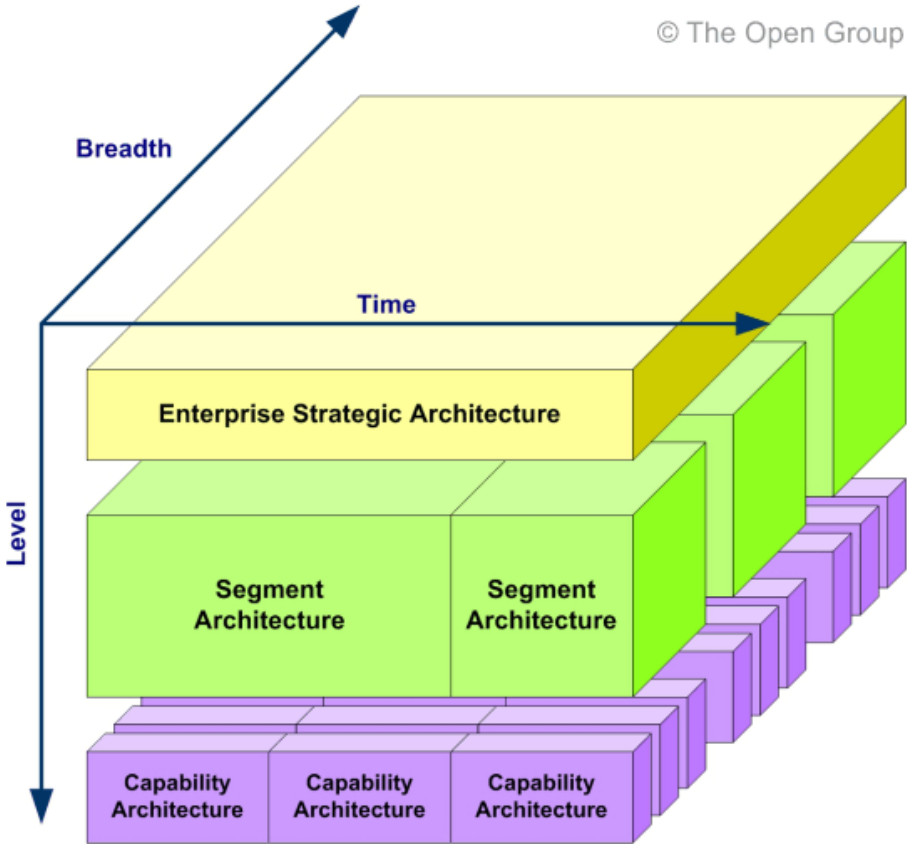

ADM Guidelines and Techniques

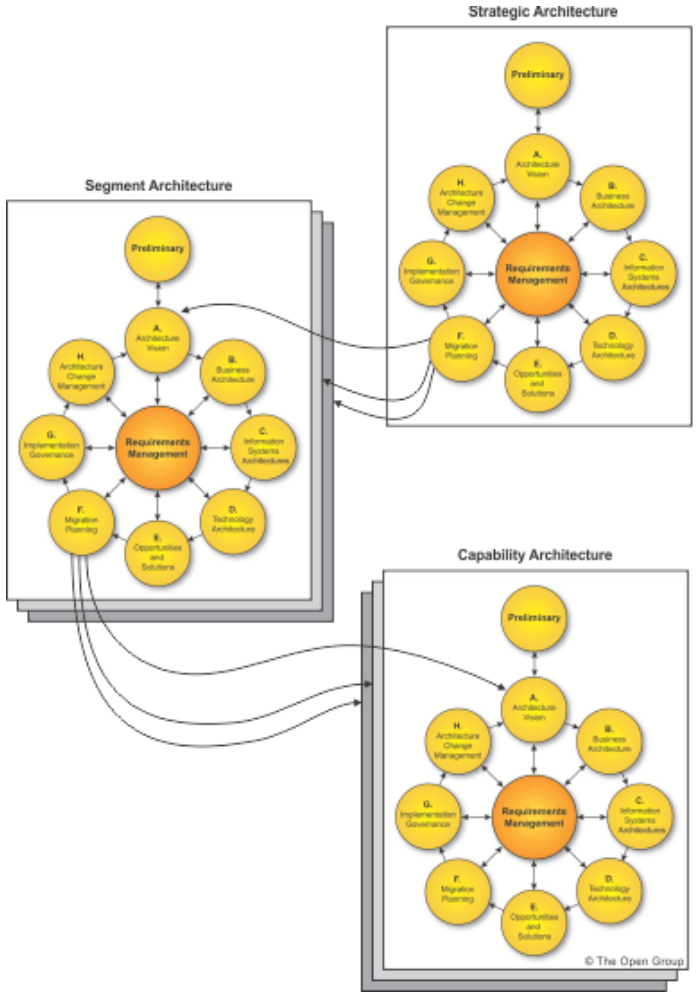

- A set of guidelines and techniques to support the application of the ADM
- The **guidelines** help to adapt the ADM to deal with different scenarios, including different process styles (e.g. iterations) and also specific requirements (e.g. security)
- The **techniques** support specific tasks within the ADM (e.g. defining principles, business scenarios, gap analysis, migration planning, risk management, etc)

Applying Iteration to the ADM

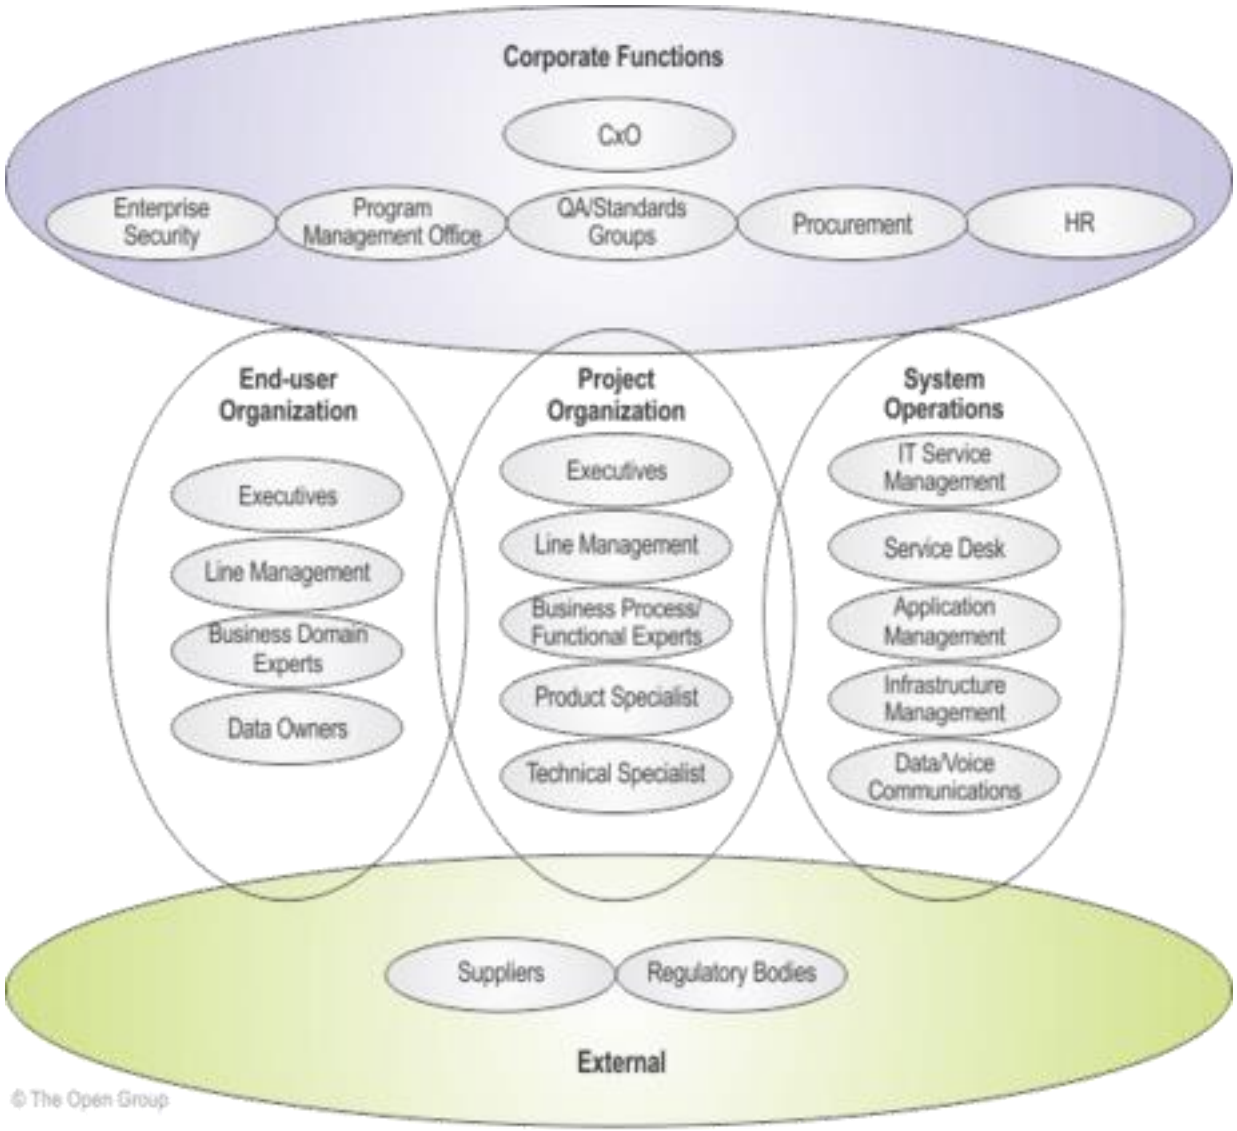

Applying the ADM

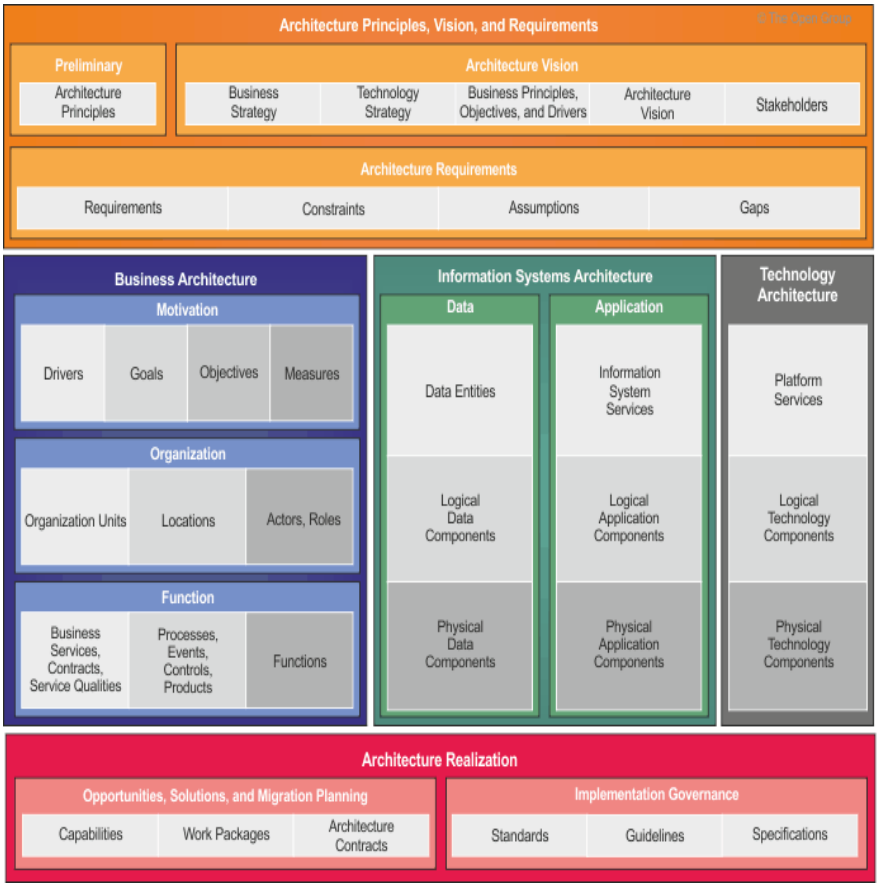

THE Open GROUP

Categories of Stakeholders

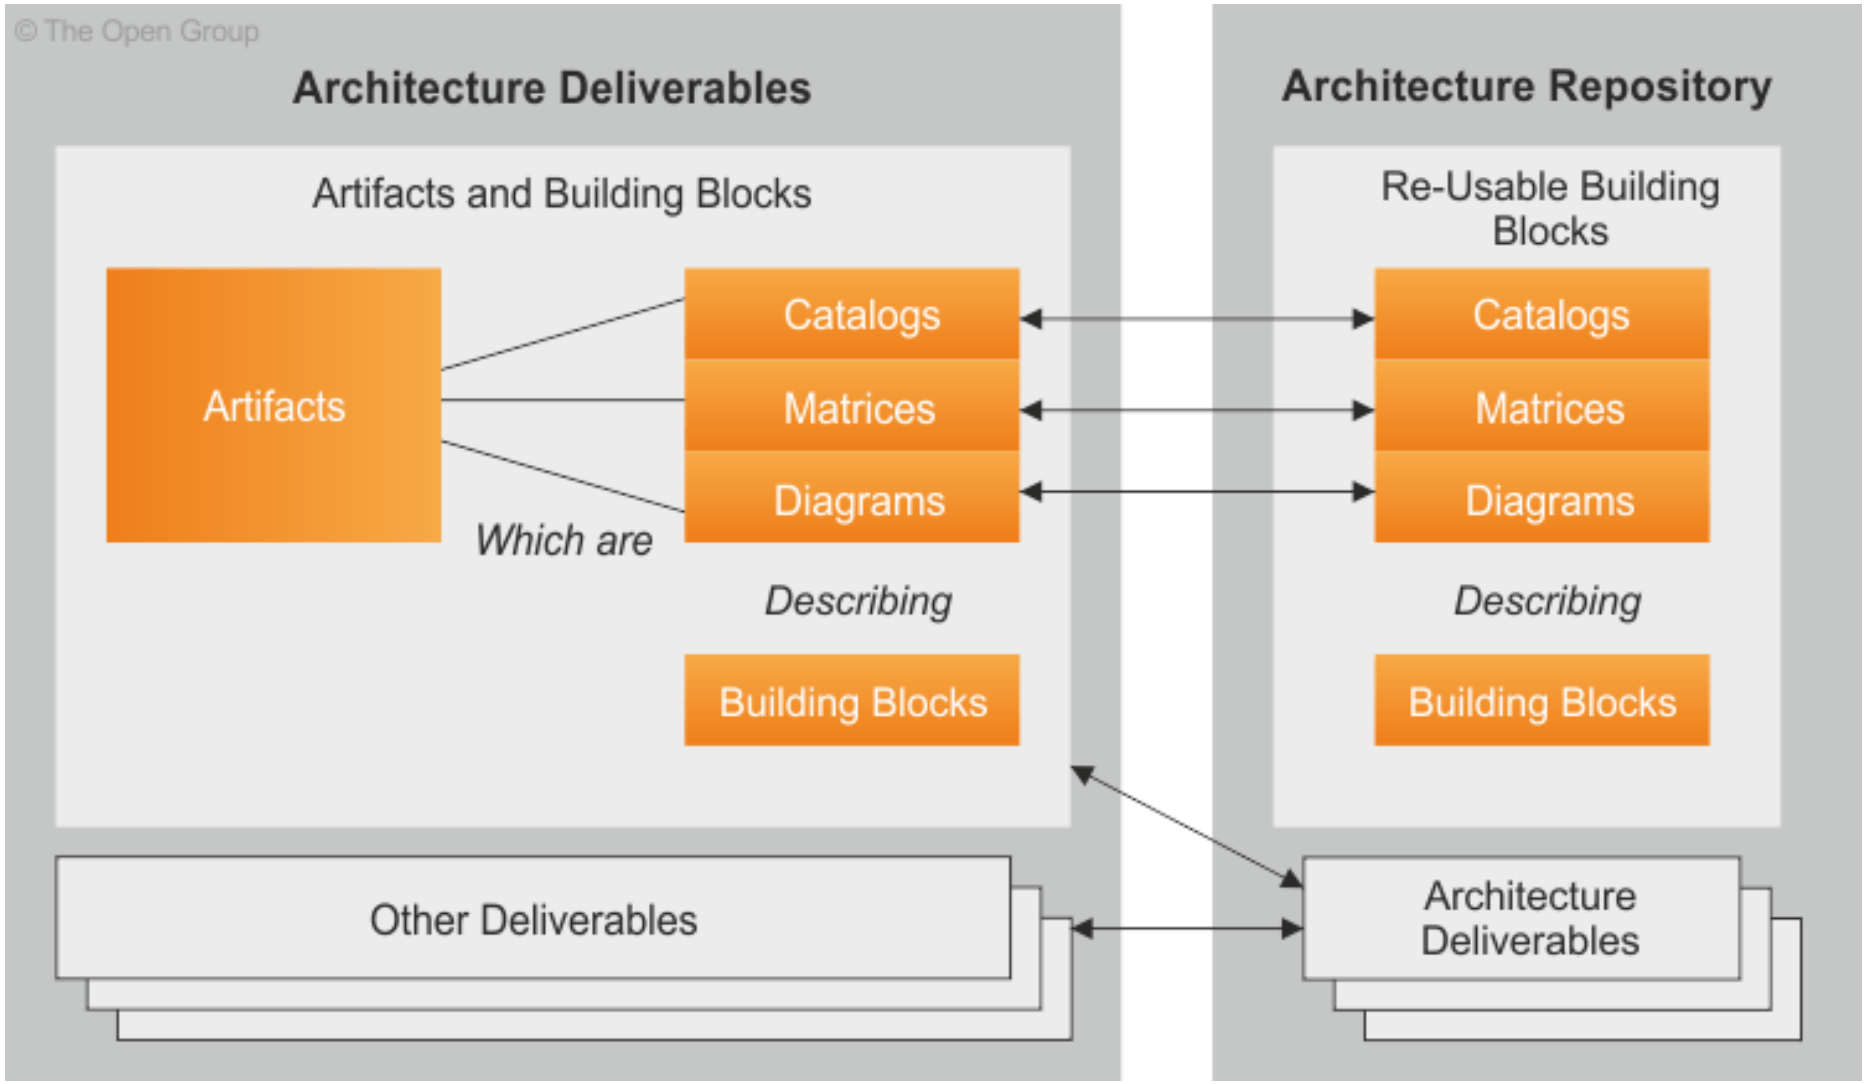

Architecture Content Framework

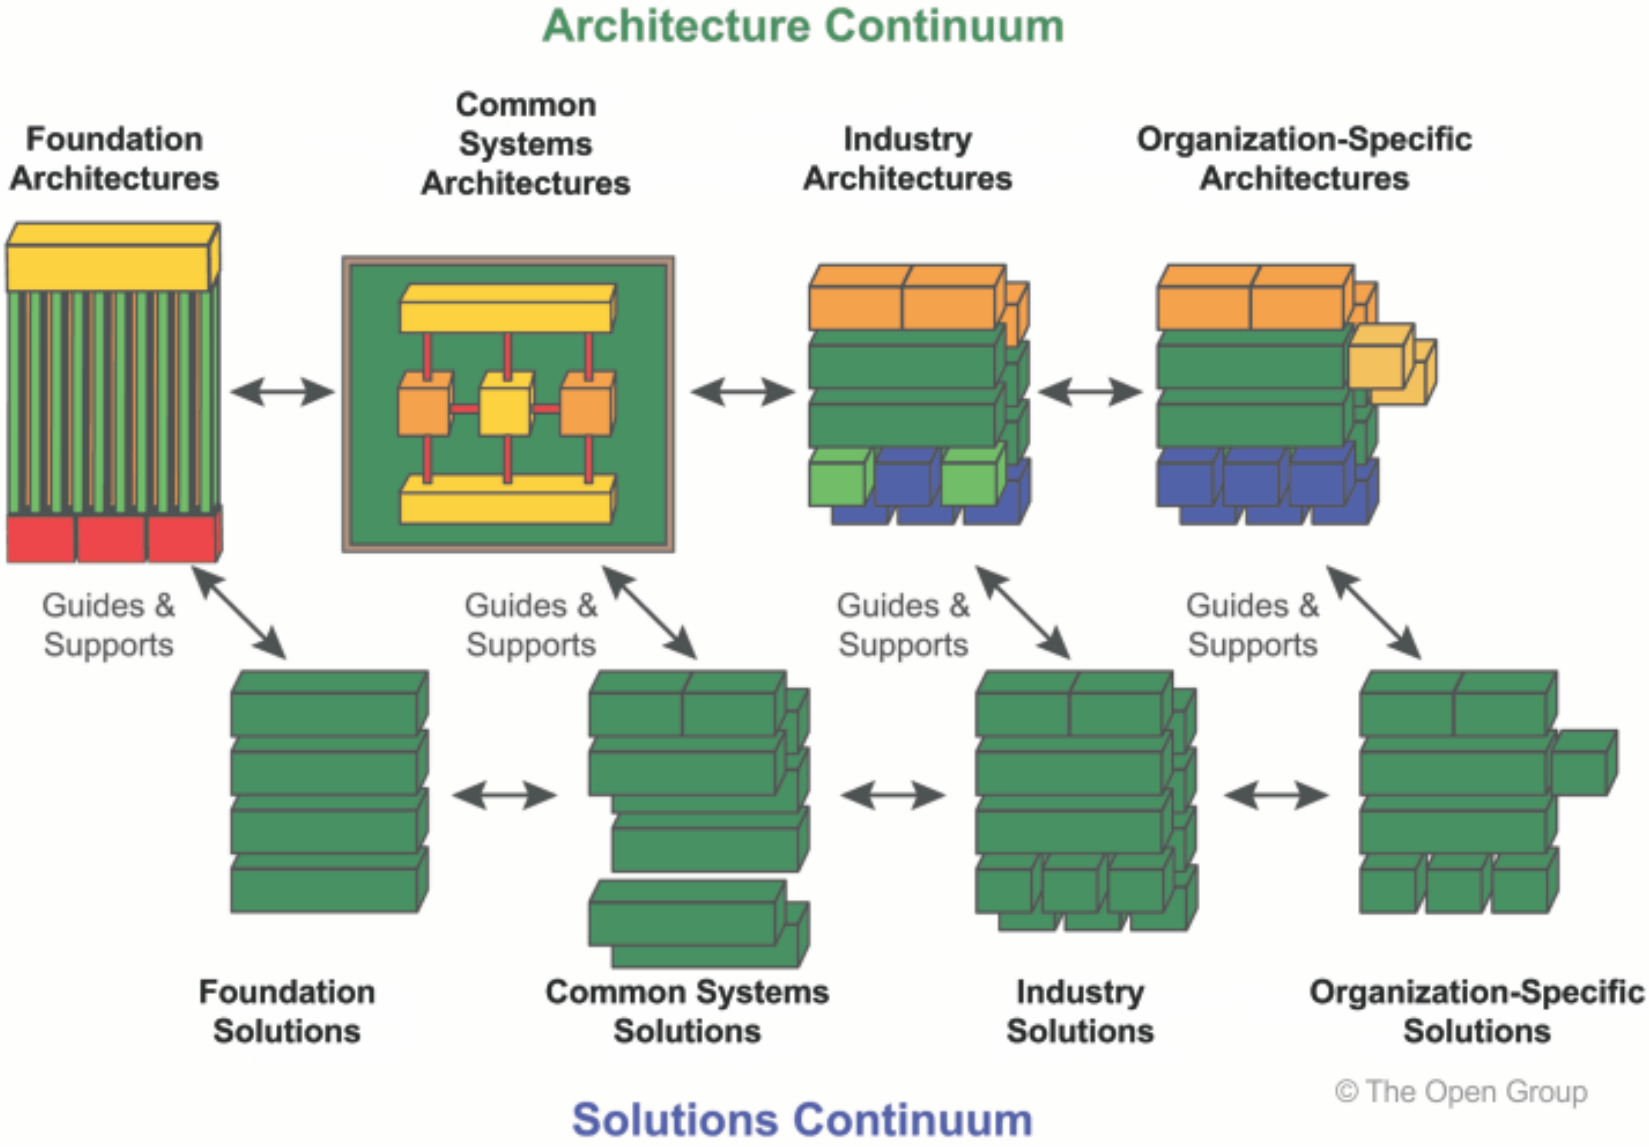

- Provides a detailed model of architectural work products
  - Deliverables, Artifacts
  - Architecture Building Blocks (ABBs) that deliverables represent
- It drives for greater consistency in the outputs of TOGAF
- It provides a comprehensive checklist of architectural outputs
- It promotes better integration of work products
- It provides a detailed open standard for describing architectures
- It includes a detailed metamodel

Deliverables, Artifacts and Building Blocks

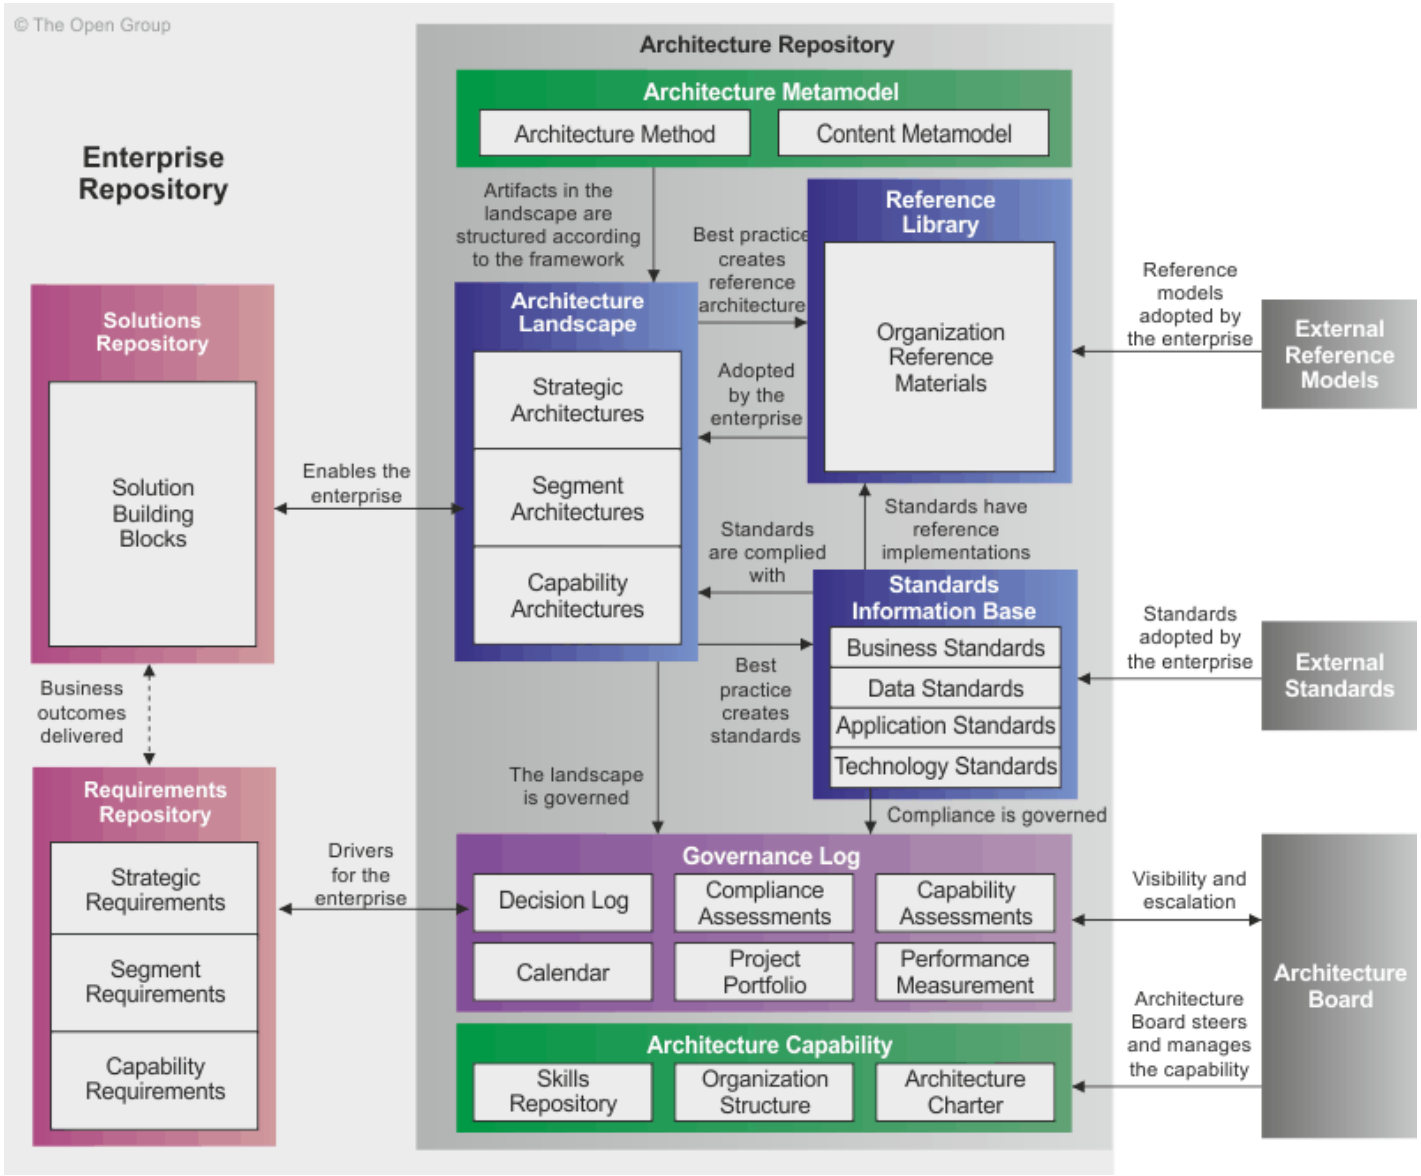

The Enterprise Continuum

THE Open GROUP

Architecture Repository

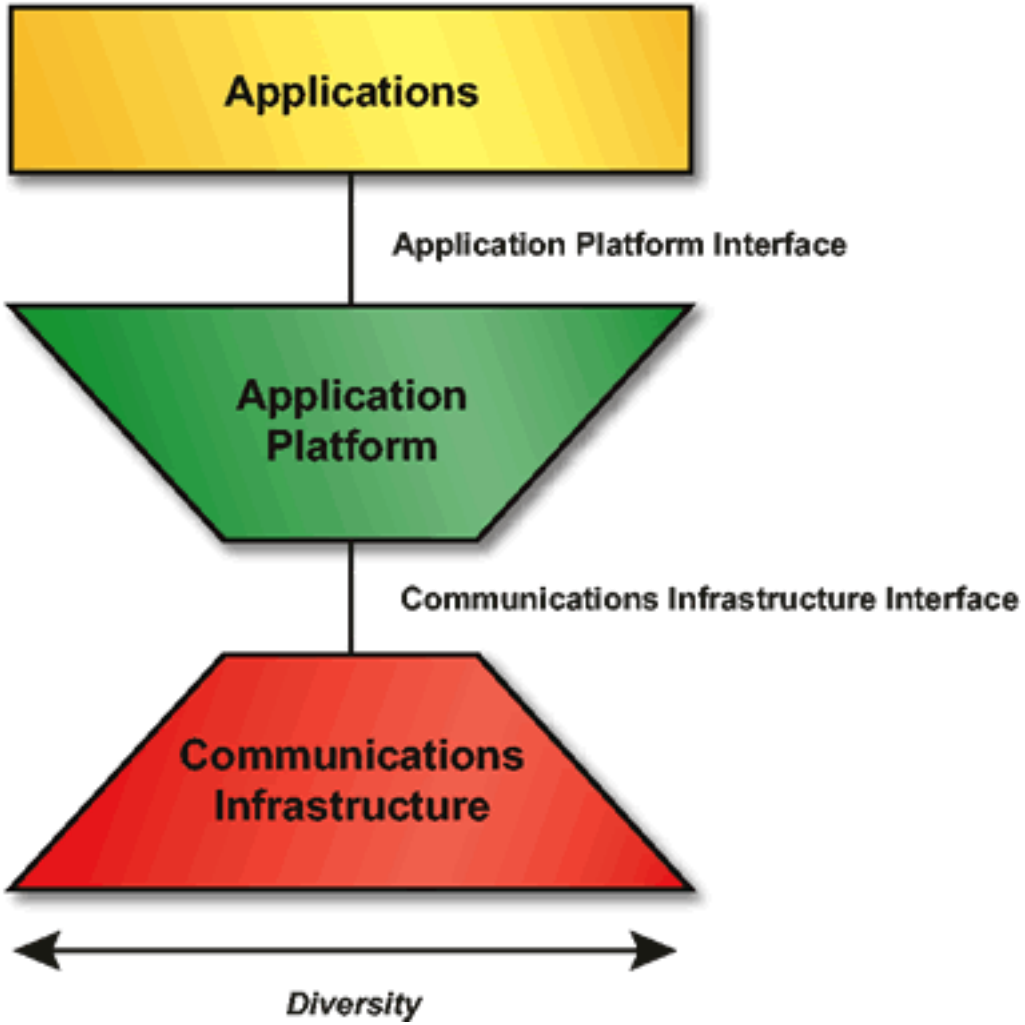

THE Open GROUP

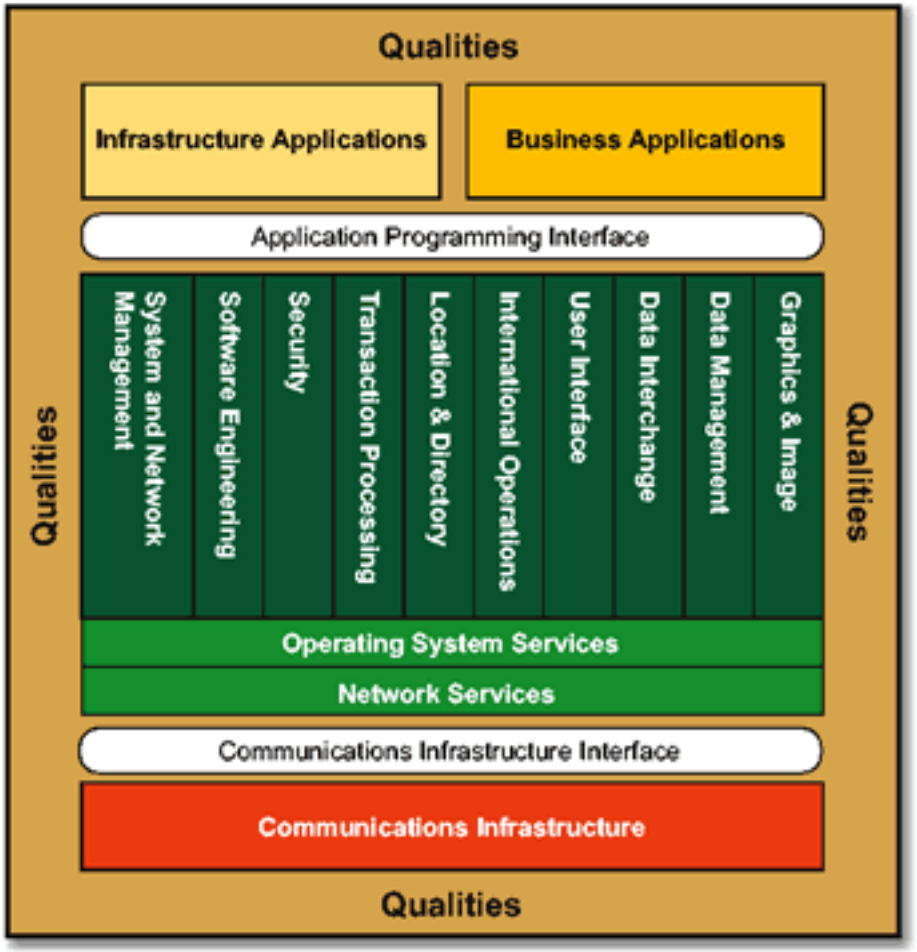

TOGAF Reference Models

- Two Reference Models are provided
  - The TOGAF **Technical Reference Model (TRM)**
    - A Foundation Architecture
    - A model and a taxonomy of generic platform services
  - The **Integrated Information Infrastructure Model (III-RM)**
    - A model for business applications and infrastructure applications
    - Specifically aimed to support the vision of "Boundaryless Information Flow"

High Level TRM

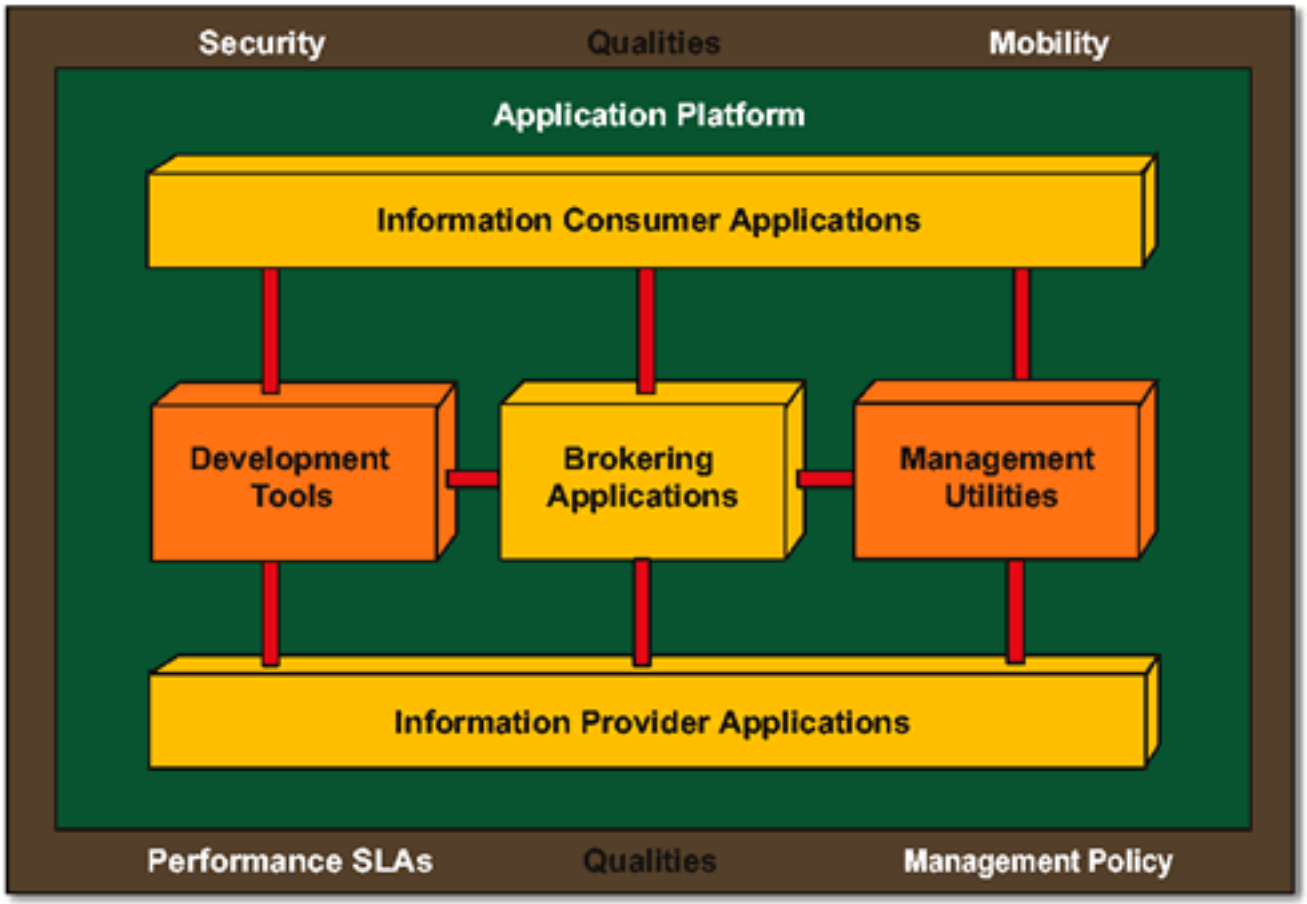

Detailed TRM

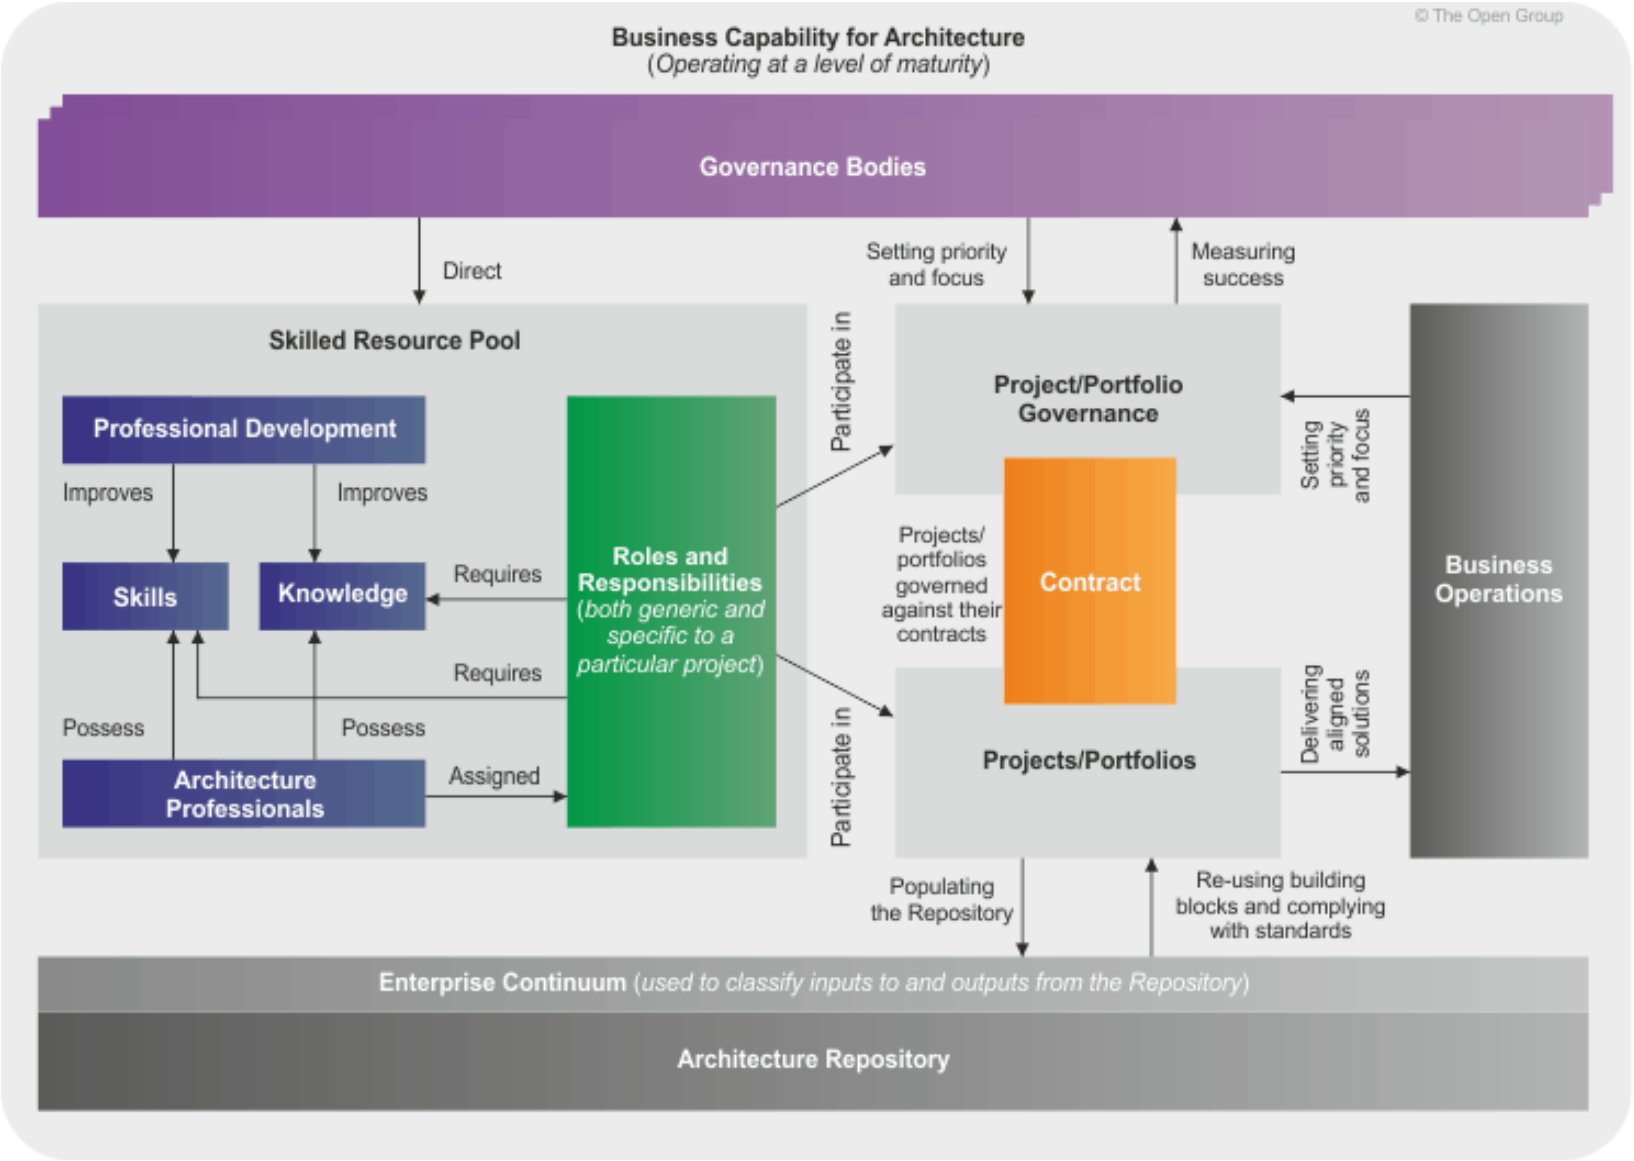

Boundaryless Information Flow

- A trademark of The Open Group
- Access to integrated information to support business process improvements
- An infrastructure that provides **Boundaryless Information Flow** has open standard components that provide services in a customer's extended enterprise that:
  - combine multiple sources of information
  - securely deliver the information wherever and whenever it is needed, in the right context for the people and systems using that information

The Integrated Information Infrastructure Reference Model (III-RM)

Capability Framework

THE Open GROUP

Establishing the Architecture Capability as an Operational Entity

- The **Architecture Capability Framework** provides guidance on establishing an operational EA practice
- It recommends management capabilities such as:
  - Finance, Performance
  - Service, Risk
  - Resource, Configuration
  - Quality, Supplier
  - Communications, Stakeholder
  - Environment

Using TOGAF with Other Frameworks

Two of the key elements of any enterprise architecture framework are:

- A definition of the deliverables that the architecting activity should produce
- A description of the method by which this should be done

Because TOGAF is a generic framework and intended to be used in a wide variety of environments, it provides a flexible and extensible content framework that underpins a set of generic architecture deliverables.

TOGAF Document Categorization Model

The content of the TOGAF document is categorized according to the following four categories:

- TOGAF Core
- TOGAF Mandated
- TOGAF Recommended
- TOGAF Supporting

Summary

- **Architecture Development Method (ADM)**
  - An iterative sequence of steps to develop an enterprise-wide architecture
- **ADM Guidelines and Techniques**
  - Guidelines and techniques to support the application of the ADM
- **Architecture Content Framework**
  - A detailed model of architectural work products, including deliverables, artifacts within deliverables, and the Architecture Building Blocks (ABBs) that deliverables represent

Summary

- **The Enterprise Continuum**
  - A model for structuring a virtual repository and methods for classifying architecture and solution artifacts
  - Supported by the Architecture Repository, a model for a physical repository
- **TOGAF Reference Models**
  - TRM, III-RM
- **The Architecture Capability Framework**
  - A structured definition of the organizations, skills, roles and responsibilities to establish and operate an EA.
