Preliminary Phase

Module 8

Module Objectives

Preliminary Phase

- Objectives
- Approach
- Steps
- Input
- Outputs

Preliminary Phase: Objectives in detail

- **Determine the Architecture Capability** desired by the Organization
  - Review the **organizational context** for conducting EA
  - Identify and scope **the elements** of the enterprise organizations affected by the Architecture Capability
  - Identify the **established frameworks**, methods, and processes that intersect with the Architecture Capability
  - Establish a Capability Maturity target

Preliminary Phase: Objectives in detail

- **Establish the Architecture Capability**
  - Define and establish the **Organizational Model** for EA
  - Define and establish **the detailed process** and resources for architecture governance
  - Select and implement **tools** that support the Architecture Capability
  - Define the **architecture principles**

Preliminary Phase is about defining "**where, what, why, who, and how we do architecture**" in the enterprise concerned

Approach

- Define the Enterprise
- Identify **key drivers** and elements in the organizational context
- Define the requirements for architecture work
- Define the **architecture principles** that will inform any architecture work
- Define the **framework** to be used
- Define the relationships between management frameworks
- Evaluate the EA maturity

Preliminary Phase: Main Inputs

- TOGAF
- Other architecture frameworks
- **Business strategies** and board business plans, IT strategy
- **Business principles**, business goals, business drivers
- Governance and legal frameworks

Any existing

- organizational model
- architecture framework, principles, repository

Steps

1. Scope the Enterprise Organizations Impacted
2. Confirm Governance and Support Frameworks
3. Define & Establish the EA Tem
4. Identify Architecture Principles
5. Tailor TOGAF and other Architecture Frameworks if any
6. Implement Architecture Tools

1. Scope the enterprise organizations impacted

- Identify **core enterprise**
- Identify soft enterprise
- Identify **extended enterprise**
- Identify communities
- Identify governance involved

2. Confirm governance and support frameworks

- The major output of this phase is a framework for **architecture governance**
- The existing governance and support models of an organization will probably need to change
- The current governance and support models need to be assessed to understand their content
- Sponsors and stakeholders will need to be consulted concerning the potential impact
- As a result of Step 2 the architecture touch points and likely impacts should be understood and agreed by relevant stakeholders

3. Define the team and organization

- Determine existing enterprise and business capability
- Conduct an architecture/business change **maturity assessment**
- Identify **gaps** in existing work areas
- Allocate key roles and responsibilities for enterprise architecture capability management and governance
- Write requests for change for existing projects
- **Scope** new EA work
- Determine **constraints** on EA work
- Review and agree with sponsors and board
- Assess budget requirements

4. Identify and establish architecture principles

- **Principles**, **rules** and guidelines that say how an organization fulfills mission
- Enterprise principles enable decision-making
- Architecture principles relate to architecture work, and include
  - Architecture **process** principles
  - Architecture **implementation** principles

Defining Architecture Principles

- **Why**
  - Architecture principles provide a framework for decision making
- **Who**
  - Developed by EAs
  - In conjunction with key stakeholders
    - CIO
    - Architecture Board
    - Other key business stakeholders

TOGAF Template for Principles

Name

- Should represent the essence of the rule, and be memorable
- Should not mention specific technology platforms
- Should avoid ambiguous words

Statement

- Should clearly describe the fundamental rule

TOGAF Template for Principles

Rationale

- Should highlight the business benefits of adhering to the principle, using business terminology
- Should describe the relationship to other principles

Implications

- Should highlight the requirements for the business and for IT for carrying out the principle
- Should state the business impact and consequences of adopting the principle

Five Qualities of Principles

1. Understandable: they can be quickly grasped. Intent is clear and unambiguous

2. Robust: they enable good decisions about architectures and plans, and enable enforceable policies and standards to be created. A principle must be precise to support consistent decision making in complex situations

3. Complete: every potentially important principle governing the management of IT is defined. Principles cover every situation perceived.

Five Qualities of Principles

4. Consistent: strict adherence to one principle may require loose interpretation of another. Principles must be expressed in a way that allows a balance of interpretations and should not be contradictory

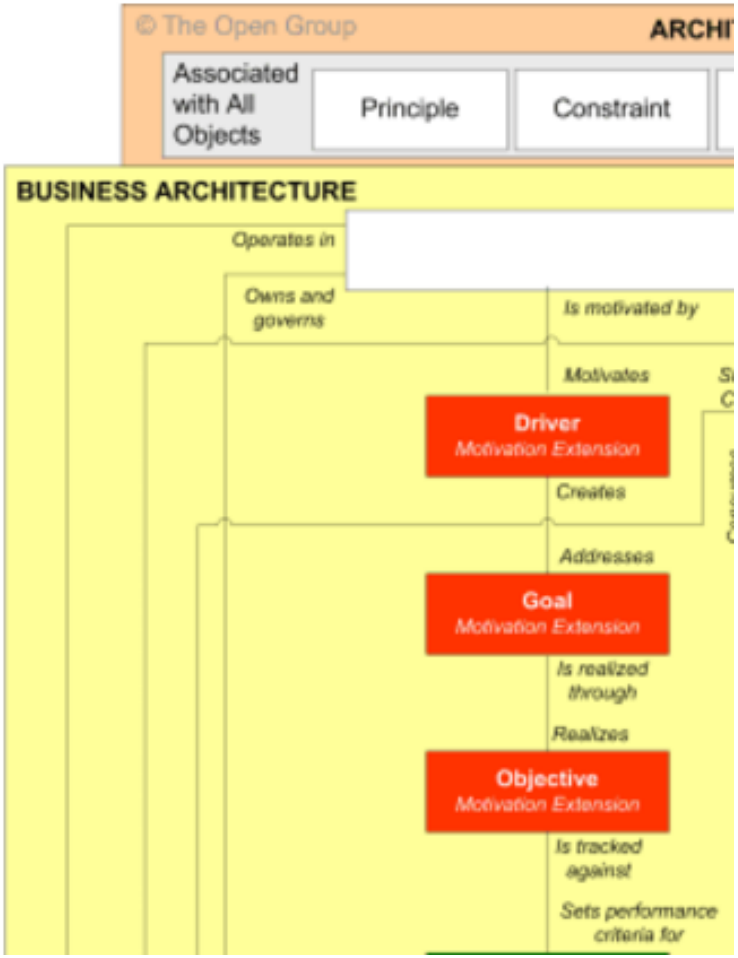

5. Stable: Principles must be enduring, yet able to accommodate change

An amendment process should be established for adding, removing, or altering principles after they are ratified.

Example: Name - Self-Serve

Statement	Customers serve themselves
Rationale	Applying the principle will improve customer satisfaction, reuce administrative overhead, and potentially improve revenue.
Implications	There is an implication to improve ease-of-use and minimize training needs; for example, members should be able to update their contact details, etc. and be able to buy additional membership products online.

Principles and the Metamodel

- Information related to Principles can be **modeled**, if the right information is captured
- The metamodel relates Principles back to specific drivers, goals and objectives

5. Tailor TOGAF and, if any, other Selected Architecture Frameworks

- **Terminology Tailoring:** it is best to use terminology that is understood across the enterprise
- **Process Tailoring:** the ADM is a generic process. Process tailoring allows us to remove tasks that are done elsewhere, add organization-specific tasks and align the ADM processes with external process frameworks
- **Content Tailoring:** using the TOGAF Architecture Content Framework, this allows adoption of third-party content frameworks and customization of the framework to support organization-specific requirements

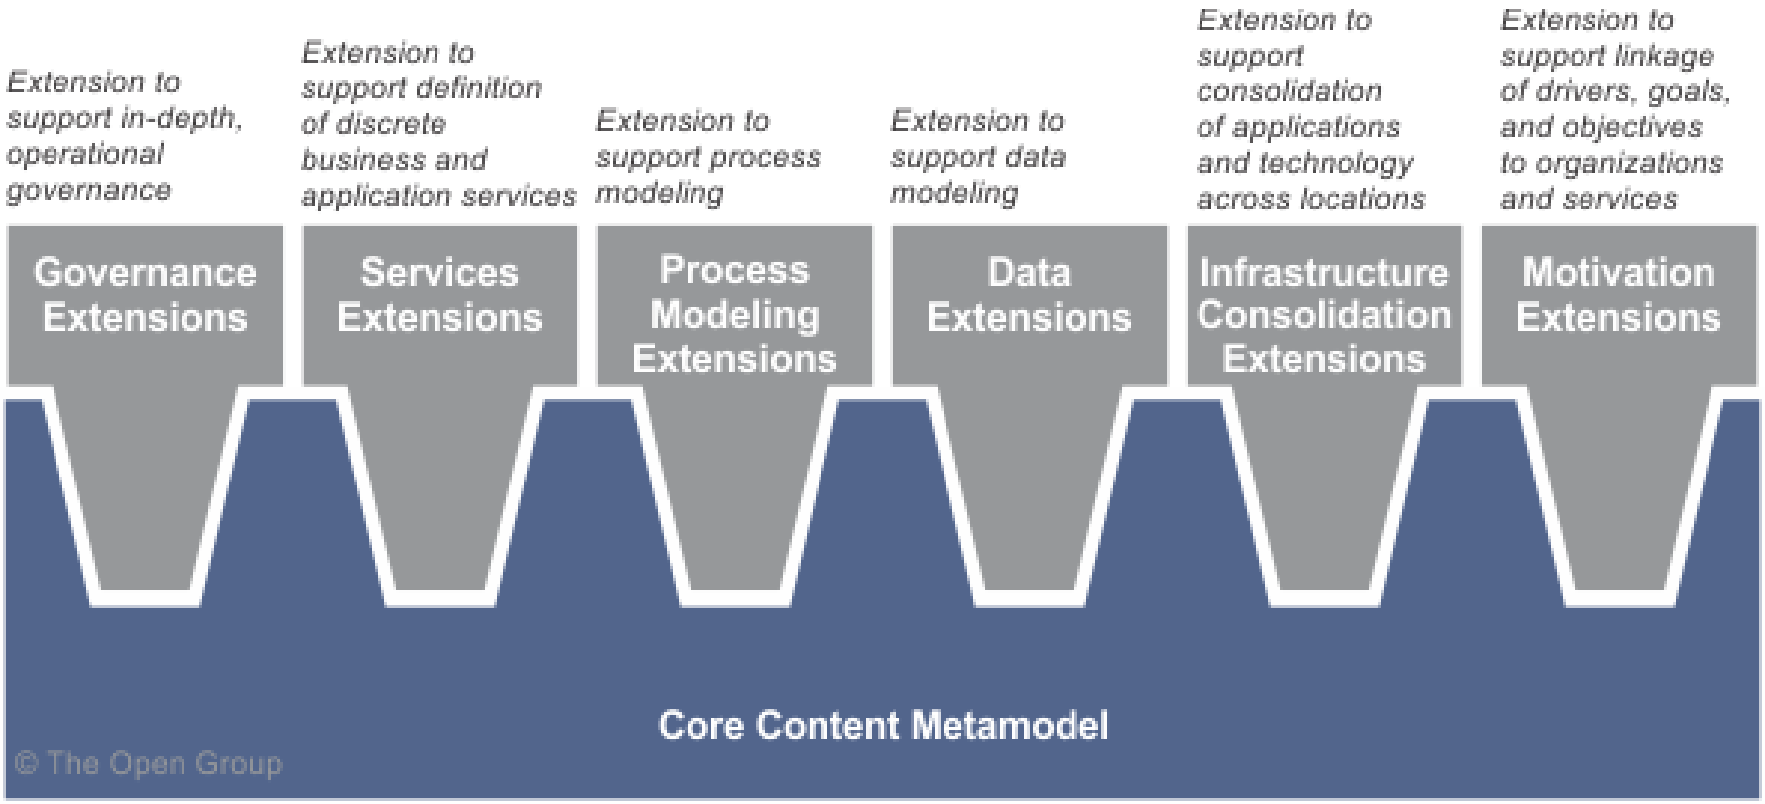

Terminology Tailoring

- Lack of agreement on the precise meanings of terms can cause problems of communication during the Architecture Engagement
- Define and agree **standard terminology**
- Provide a **Glossary**, if appropriate

Process Tailoring

- **Re-order** the phases of the ADM
- Only use a subset of the phases
- Complete the **Information Systems** or **Technology Architecture first**

Content Tailoring

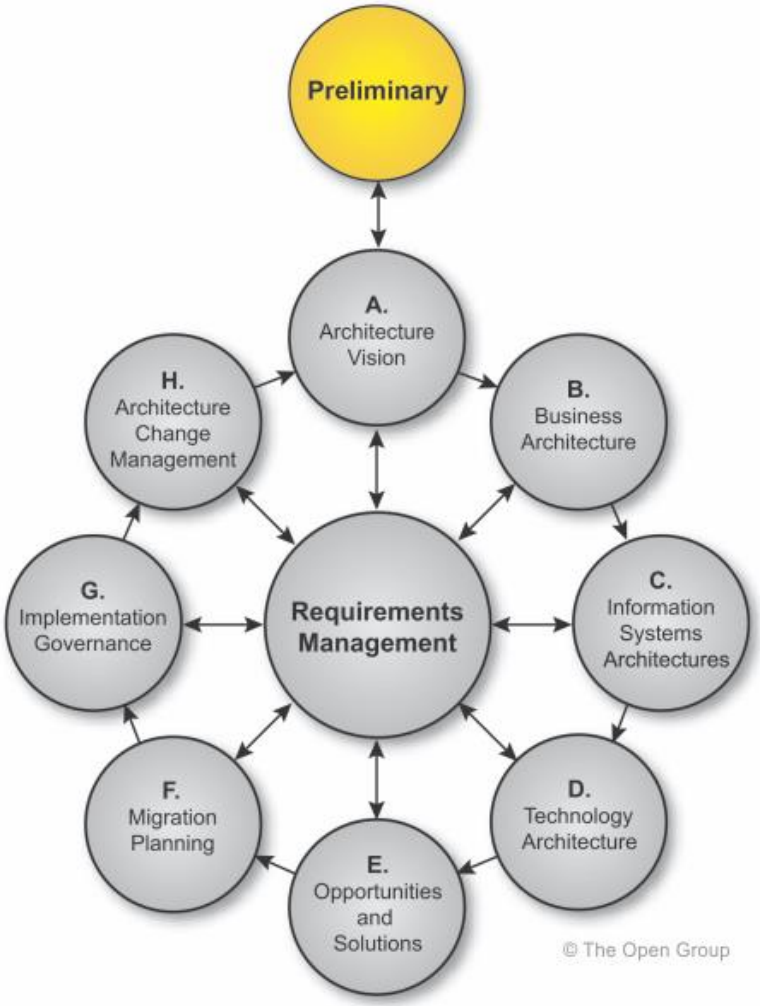

6. Implement Architecture Tools

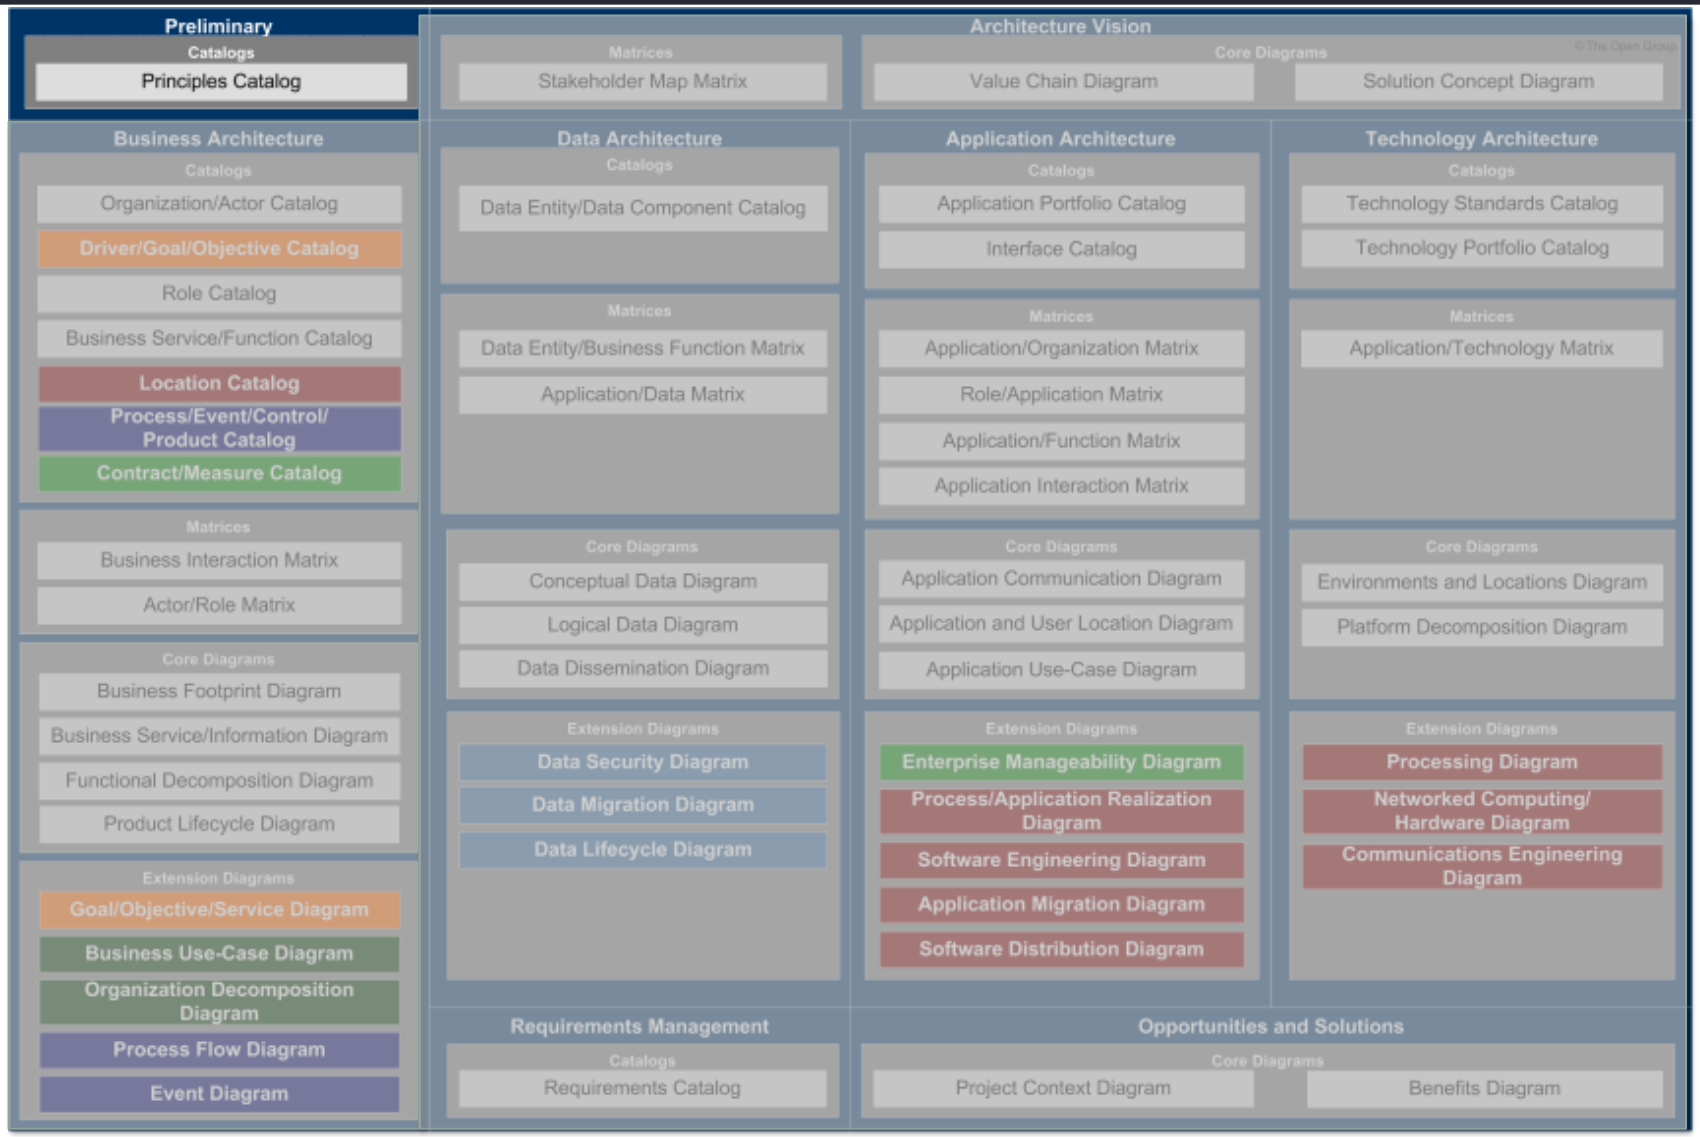

- In this step, we must select appropriate architecture tools
- The implementation of the tools may range from a trivial task to a more involved system implementation activity utilizing the **TOGAF Content Metamodel**

Preliminary Phase: Outputs

- **Organizational model** for EA
- Tailored Architecture Framework, including **architecture principles**
- Initial **Architecture Repository**
- Restatement of business principles, goals and drivers
- **Request for Architecture Work**
- **Architecture Governance Framework**

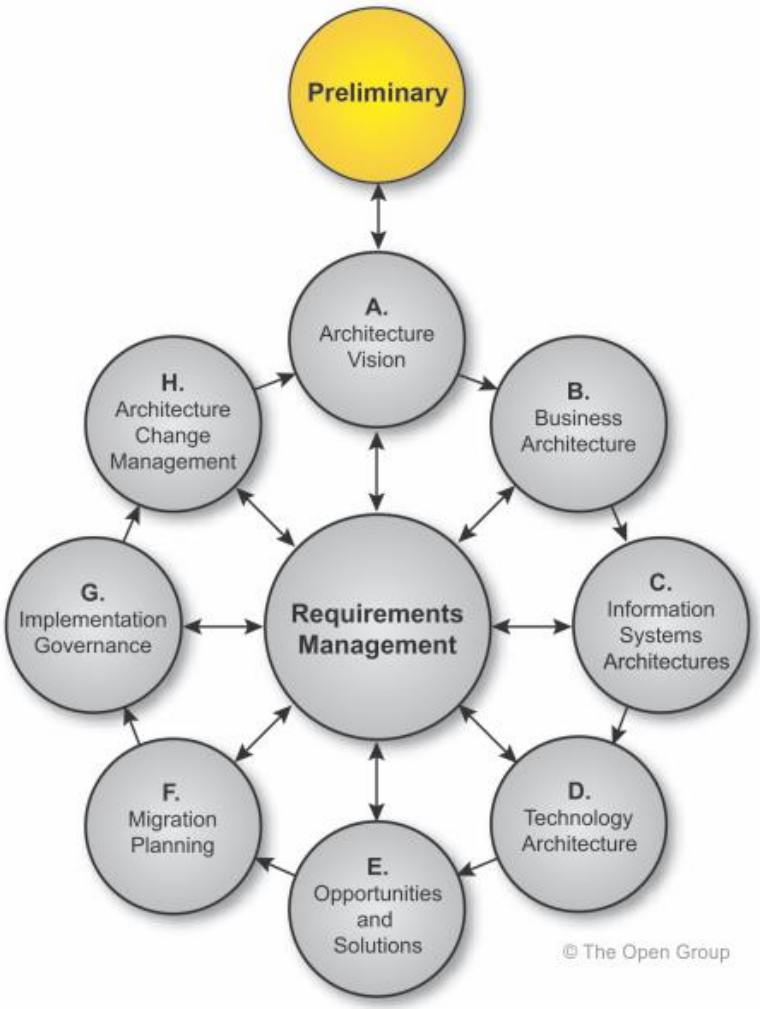

Artifacts

THE Open GROUP

Summary

- The main objective of the Preliminary Phase is to **prepare an organization** for a successful EA project by defining **"how we do architecture"**

Summary

Preliminary Phase			
Objectives	**Steps**	**Inputs**	**Outputs**
Determine the Architecture Capability desired by the organization: • Review the organizational context for conducting enterprise architecture • Identify and scope the elements of the enterprise organizations affected by the Architecture Capability • Identify the established frameworks, methods, and processes that intersect with the Architecture Capability • Establish Capability Maturity target Establish the Architecture Capability: • Define and establish the Organizational Model for Enterprise Architecture • Define and establish the detailed process and resources for architecture governance • Select and implement tools that support the architecture activity • Define the Architecture Principles	Scope the enterprise organizations impacted Confirm governance and support frameworks Define and establish enterprise architecture team and organization Identify and establish architecture principles Tailor TOGAF and, if any, other selected Architecture Frameworks Implement architecture tools	TOGAF Other architecture framework(s) Board strategies, business plans, business strategy, IT Strategy, business principles, business goals, and business drivers Governance and legal frameworks Architecture capability Partnership and contract agreements Existing organizational model for enterprise architecture Existing architecture framework, if any, including: • Architecture method • Architecture content • Configured and deployed tools • Architecture Principles • Architecture Repository	Organizational Model for Enterprise Architecture Tailored Architecture Framework, including architecture principles Initial Architecture Repository Restatement of, or reference to, business principles, business goals, and business drivers Request for Architecture Work Architecture Governance Framework
